New Managed IT Services/Utah Released

January 04, 2016

January 04, 2016 - PRESSADVANTAGE -

MJ Technology & Solutions, LLC is proud to announce that they have recently started to roll out their new managed IT services. These services will be provided mainly to clients in Utah. Full details are available at <https://mjtechs.com/remote-managed-services/>.

David from MJ Technology & Solutions, LLC says: "Today, almost every business and organization is reliant on technology. There is no other way for them to maintain their competitive edge in the professional market. However, they have to make sure their business assets are protected, and that they can operate at maximum efficiency. This is possible thanks to our remote managed IT services, which will avoid wasting time and money on mismanaged IT assets."

The new service focuses on popups, viruses and licensing management. It will also address slow running PCs, services, network switches, routers and more. Furthermore, they ensure businesses would be able to keep their proprietary information safe by properly managing their mobile devices.

The company is also very active on social media and they encourage everyone to give them a 'Like' on Facebook through <https://www.facebook.com/mjtechsolutions/?ref=hl>. This will give them an opportunity to stay on top of industry news and development. Additionally, it offers people a chance to join in relevant

conversations. Those who have used the service have already taken the opportunity to leave reviews through this channel as well. "Prompt service at home," says Benjamin P. "Quickly resolved constant performance issues and offered some options for upgrades later on that were reasonably priced as well."

One of the things that really sets MJ Technology & Solutions, LLC apart from others is that they offer all their services remotely. Full details on how they achieve this can be seen at <https://mjtecs.com/remotemonitoring/>. Essentially, their work is designed to make sure their clients are able to be proactive, rather than reactive, solving problems before they even appear. Because the services are offered remotely, businesses do not have to experience any downtime during updates and management, and they know that they are always protected. All maintenance tasks can be included in the packages, meaning companies know that they are safe and protected 24/7.
