

## **Elevate Your Projects with New Black Custom Rub-On Transfer from Custom Rub-On Transfers**

*May 28, 2024*

May 28, 2024 - PRESSADVANTAGE -

Custom Rub-On Transfers, an industry leader in the development of innovative decal solutions, is excited to announce the introduction of their latest product: a new black custom rub on transfer that comes with a Deep Rich Satin Finish. This addition to their product line aims to provide customers with an enhanced level of elegance and versatility suitable for a myriad of uses, ranging from personal crafting projects to sophisticated home decor and effective branding initiatives. As a company recognized for its commitment to quality through its provision of high-grade custom rub-on transfers, it continues to pioneer alternatives to the conventional use of Letraset, waterslide decals, and vinyl stickers.

The introduction of the black custom rub on transfer marks a significant achievement in the industry, featuring a deep, rich neutral black tone coupled with a smooth satin finish. This distinctive blend elevates the aesthetic allure of the transfers while ensuring a seamless application across any colored surface, eliminating the need for water or transfer tape. The exceptional opaqueness and natural-looking finish render these transfers ideal for a variety of surfaces and materials including, but not limited to, wooden furniture, glass surfaces, control panels, and guitars.

Charles Platon, the CEO of Custom Rub-On Transfers, expressed his excitement over the launch in a previous press release, "We are thrilled to introduce our new black custom rub on transfer to our customers. The Deep Rich Satin Finish adds a layer of sophistication and versatility that we believe will inspire our clients to create stunning, unique designs. This addition to our product line underscores our commitment to quality, innovation, and meeting the diverse needs of our customers.?"

These black decal transfers are designed for easy application, requiring no specialized tools or complex procedures. The process involves cutting out the design, peeling off the backing, positioning it on the chosen surface, and then rubbing over the top film to initiate the transfer of the image or text. Upon removing the top film post-transfer, the design integrates seamlessly into the surface, bearing no visible background or edge, thereby offering the appearance of direct printing on the material.

Custom Rub-On Transfers caters to various project requirements by offering a spectrum of sizes and customization options. They also provide tools such as a sheet size calculator and templates to assist customers in preparing their artwork for optimal print-ready outcomes. Coupled with free 2-day shipping across the continental US and comprehensive support for multiple file formats, the company strives to ensure a smooth and user-friendly experience from conception to completion of every project.

Platon further noted, "We understand the importance of having a reliable, easy-to-use solution for transferring designs. Our black custom rub on transfer with the Deep Rich Satin Finish not only provides that but also opens up a world of creative possibilities. We invite our customers to explore our website, take advantage of our resources, and see how these transfers can elevate their projects.?" Customers intrigued by the potential of the new Black Decal Transfers with Deep Rich Satin Finish are encouraged to visit the Custom Rub-On Transfers website or store to explore the extensive possibilities offered by these transfers. Whether the goal is to enrich personal projects or to add a sophisticated flair to professional endeavors, these transfers are designed to deliver superior results.
