

Essential Skin Spa Launches Advanced Hyperpigmentation Treatments to Help Clients Achieve Even, Radiant Skin

May 31, 2024

SYLVANIA, OH - May 31, 2024 -

Sylvania, OH - Essential Spa, a leading skincare clinic in Northwest Ohio, is excited to announce the introduction of cutting-edge hyperpigmentation treatments designed to help clients attain a more even, luminous complexion. The spa's expert estheticians have developed personalized treatment plans that combine professional-grade products and innovative techniques to target hyperpigmentation at its source, offering hope to those struggling with this common skin concern.

Hyperpigmentation, characterized by patches of skin that appear darker than the surrounding areas, affects millions of people worldwide. While not a medical condition per se, it can cause significant distress and self-consciousness for those who experience it. Common types of hyperpigmentation include melasma, which is often triggered by hormonal changes; sunspots, resulting from excessive sun exposure; and post-inflammatory hyperpigmentation, which occurs as a result of injury or inflammation to the skin, such as acne.

"At Essential Spa, we understand the impact that hyperpigmentation can have on our clients' self-confidence," said Janna Goodall, founder of Essential Spa. "That's why we have made it our mission to offer the most advanced, effective treatments available to help our clients achieve the even, radiant skin they deserve."

Essential Spa's hyperpigmentation treatments are tailored to each client's unique needs and skin type. The spa's estheticians begin with a thorough consultation to assess the extent and cause of the hyperpigmentation, then develop a customized treatment plan that may include a combination of in-office procedures and at-home skincare products.

One of the key treatments offered at Essential Spa is the chemical peel, which works by exfoliating the top layer of skin to reveal brighter, more even-toned skin beneath. The spa offers a range of peels at different strengths, allowing them to customize the treatment to each client's needs and sensitivity level.

Another popular treatment is the HydraFacial Britenol Booster, which combines the detoxifying and hydrating benefits of a traditional HydraFacial with a potent blend of vitamin C and alpha-arbutin to target hyperpigmentation. This gentle yet effective treatment is suitable for all skin types and can provide noticeable results after just one session.

For clients seeking a more high-tech solution, Essential Spa offers the Geneo Illuminate Facial. This cutting-edge treatment uses oxygen therapy and ultrasound technology to infuse the skin with a professional-strength brightening serum, promoting a more even, luminous complexion.

In addition to in-office treatments, Essential Spa's estheticians recommend a personalized at-home skincare regimen to support and maintain the results achieved in the spa. The spa carries a carefully curated selection of medical-grade skincare products from top brands such as Jan Marini and Circadia, which contain proven ingredients like vitamin C, licorice root extract, and bearberry extract to help brighten the skin and prevent further hyperpigmentation.

"We believe that everyone deserves to feel confident and beautiful in their own skin," said Goodall. "By combining the latest advancements in skincare technology with our passion for personalized service, we aim to help our clients achieve their skin goals and embrace their natural radiance."

Essential Spa's hyperpigmentation treatments are now available at their Sylvania, OH location, with plans to expand to additional locations in the future. The spa welcomes clients from throughout Northwest Ohio and Southeast Michigan to experience the transformative power of their services.
