

## **AP Precision Metals Inc. Enhances Aluminum Busbar Manufacturing with New High-Precision Equipment**

*June 03, 2024*

June 03, 2024 - PRESSADVANTAGE -

AP Precision Metals, Inc., based in San Diego and recognized for its all-encompassing metal solutions, has recently bolstered its manufacturing capabilities by incorporating a new press brake, the Amada HG5020-NT - 56 Ton, 7-foot long. This addition is specifically aimed at enhancing the high-accuracy processing of Aluminum Busbar. This initiative is a reflection of the company's ongoing commitment to improving the precision and efficiency of its busbar manufacturing services, as highlighted through their extensive services detailed on their website.

Aluminum Busbar plays an essential role in electrical power distribution, necessitating accuracy in its fabrication because it functions to conduct electricity within various electrical apparatus such as switchboards, distribution boards, and substations. The acquisition of the Amada press brake by AP Precision Metals comes in response to the growing demand for more effective and dependable busbar solutions. Renowned for its precision and versatility, the Amada HG5020-NT press brake is an optimal tool for the complex manufacturing processes required for busbars.

A spokesperson for AP Precision Metals, Joshua, remarked, "Our investment in the Amada HG5020-NT

press brake is a testimony to our dedication to quality and efficiency in busbar production. With this new addition, we are better positioned to offer our clients quicker turnaround times and even greater precision in aluminum busbar manufacturing." More information about the critical roles these manufacturing capabilities play in the broader industry can be explored on their website.

With over twenty years of leadership in the metal fabrication industry, AP Precision Metals offers an array of services, including fabrication, cutting, welding, painting, finishing, assembly and kitting, busbar manufacturing, OEM supply, and quality assurance. They adopt an inclusive approach to production, providing scalable solutions that align with the evolving needs of their clients' businesses.

Housed within AP Precision Metals' advanced 40,000 sq. ft. manufacturing facility, the Amada HG5020-NT press brake is engineered for high-accuracy processing, a critical factor in creating busbars that comply with exacting standards. The technology behind this machine guarantees the consistent production quality of each busbar, adhering to the precise needs of clients.

Joshua further explains the significance of the equipment, stating, "The Amada HG5020-NT represents a vital expansion of our capabilities. It boosts our capacity to manufacture highly precise and dependable aluminum busbars, which is in line with our goal to deliver superior-quality products while advancing manufacturing efficiency."

As the market increasingly leans towards more environmentally friendly materials, the significance of using Aluminum Busbar rises. Aluminum stands out for its cost-effectiveness, lightweight nature, durability, and recyclability, offering a superior alternative to traditional materials like copper. AP Precision Metals' emphasis on manufacturing aluminum busbar is a testament to their commitment to offering solutions that are not only effective but also environmentally sustainable.

To conclude, the acquisition of the Amada HG5020-NT press brake by AP Precision Metals marks a significant advancement in their capabilities for producing aluminum busbar. This enhancement fortifies their position as a leading provider of precise, efficient, and eco-friendly busbar solutions. This progression is indicative of AP Precision Metals' relentless pursuit of innovation and excellence in the metal fabrication domain, ensuring clients receive manufacturing precision and service of the highest caliber.
