Tersigni Vision Unveils Comprehensive Vision Correction Solutions Beyond LASIK

June 03, 2024

Lake Oswego, OR - June 03, 2024 -

Tersigni Vision, a leader in advanced eye care solutions, today announced an expanded suite of vision correction alternatives for individuals who are not candidates for LASIK surgery in an article titled "What if I'm Not a Candidate for LASIK? Can You Still Help?", found on the website here: <https://www.tersignivision.com/lasik/what-if-im-not-a-candidate-for-lasik-can-you-still-help/>. Recognizing that LASIK, while transformative for many, does not suit all visual impairments or patient conditions, Tersigni Vision is dedicated to ensuring that the quest for clear vision is accessible and achievable for everyone.

Despite the widespread success of LASIK (Laser-Assisted In Situ Keratomileusis) in correcting vision, factors such as thin corneas, irregular corneal shapes, and high prescription levels can preclude some individuals from being ideal candidates. Dr. Tersigni and the highly skilled team at Tersigni Vision have committed themselves to offer an extensive array of LASIK alternatives, thereby broadening the horizon for those seeking vision correction.

Among the alternatives highlighted by Tersigni Vision is Photorefractive Keratectomy (PRK), a procedure similar to LASIK but which removes the front epithelial tissue layer, making it suitable for patients with

conditions that LASIK cannot address. Additionally, the practice offers Phakic Intraocular Lenses (IOLs) and Refractive Lens Exchange (RLE), innovative solutions catering to patients with severe refractive errors, thin or irregular corneas, or those who suffer from severe dry eye.

Dr. Tersigni, the founder of Tersigni Vision, emphasized, "Discovering you're not a candidate for LASIK can be disheartening, but it should not end your journey towards achieving clear vision. With the widest variety of effective LASIK alternatives in Portland, our goal is to personalize our approach to meet the unique needs of each patient, ensuring they receive the best possible care and outcomes."

Tersigni Vision's commitment to personalized care is evident in their comprehensive consultation process, which includes a thorough eye exam to determine the most suitable procedure for each individual's specific situation. This patient-centric approach is designed to navigate the complexities of eye health and vision correction, ensuring that each patient's path to clearer vision is as smooth and informed as possible.

The announcement is expected to resonate strongly with individuals who have previously been told they are not candidates for LASIK, offering them renewed hope and options for vision correction. Tersigni Vision's initiative is not only a testament to their dedication to pioneering in the field of ophthalmology but also a reflection of their commitment to enhancing the quality of life for their patients through improved vision.

Patients and interested parties are encouraged to reach out to Tersigni Vision for a consultation, where they will be met with compassionate care, a comprehensive evaluation, and a discussion of the most suitable treatment options tailored to their unique needs. This invitation extends not just to those seeking alternatives to LASIK, but to anyone looking to explore the full potential of their vision and improve their quality of life through advanced eye care solutions.
