

M3 Announces Increase In Residential Putting Green Installations

January 07, 2016

January 07, 2016 - PRESSADVANTAGE -

A Miami, FL company has announced that there has been a huge increase in requests for the installation of places in residential homes where golf enthusiasts can practice their putting. The company attributes this increase to the fact that more people are retiring to South Florida, and that many of these people want to spend their retired life playing golf. The company, which focuses on artificial grass installations is all too happy to oblige.

JC Mereles from M3 Artificial Grass & Turf Installation Miami says: "Florida is known as the retirement state and there is no better way to stay fit and active in retirement age as through golf. We are so happy to see that people are turning to the use of artificial grass putting greens in their residential properties. It means that we can play a part in keeping people healthy, while protecting the environment and generally improving the look of South Florida at the same time."

Surprisingly, very little space is needed to install home putting greens. Most people want to simply learn how to putt, and are not looking to have an entire 18 hole golf course installed on their property. Residential putting greens can be designed in a variety of different shapes and sizes, either emulating those on a real

golf course, or having a few obstacles in the way to make at home golf playing more exciting.

Those who have used the services of M3 Artificial Grass & Turf Miami have been very happy with the results. "My parents retired to Miami and I wanted to give them something really special for their new home," says Anthony M. "I contacted M3 to discuss the possibilities of installing a putting green in their backyard, and they provided me with an excellent quotation. I had it installed while my parents were away on a cruise and they were absolutely delighted when they came back. I can't thank M3 enough for their fantastic work."

Putting greens are becoming increasingly popular in domestic properties. Creating these out of artificial grass means no money has to be spent on watering the grass, which protects the environment, as well as save time, as the green is always ready to be used.
