

## **Lucent Vision Sheds Light on the Cost of EVO ICL in Long Beach**

*July 09, 2024*

LONG BEACH, CA - July 09, 2024 - PRESSADVANTAGE -

Lucent Vision, a premier provider of advanced vision correction solutions, is pleased to announce the release of an in-depth article titled "Cost of EVO ICL in Long Beach," aimed at demystifying the expenses associated with this leading-edge procedure. As the demand for high-quality vision correction solutions continues to rise, Lucent Vision is committed to providing transparent, comprehensive information to help patients make informed decisions about their eye health. The article can be found on the Lucent Vision website here: <https://lucentvision2020.com/evo-icl/cost-of-evo-icl-in-long-beach/>

EVO Implantable Collamer Lens (ICL) represents a significant advancement in vision correction technology, offering a viable alternative to traditional laser-based procedures like LASIK. With the ability to correct a range of refractive errors, including myopia, hyperopia, and astigmatism, EVO ICL is becoming an increasingly popular choice for patients seeking long-term solutions for their vision needs. However, as with any medical procedure, understanding the costs involved is crucial for potential patients.

The article published by Lucent Vision delves into the various factors that influence the cost of EVO ICL in Long Beach. Patients will learn that the price of this advanced procedure can vary widely based on several

key factors. These include the type of lens used, the surgeon's experience and skill level, the location of the procedure, and the patient's unique vision requirements. Typically, the cost of the UV-protective intraocular lenses alone ranges between \$1,000 and \$1,500 per eye. When additional expenses such as the surgeon's fees, materials, facility fees, pre-operative and post-operative care, and follow-up appointments are factored in, the total cost can be significantly higher. Understanding these components helps patients appreciate the value of investing in a procedure that prioritizes quality and safety.

The geographic location where the surgery is taking place plays a role in the pricing, with costs potentially varying due to regional surcharges. In Long Beach, the average cost of EVO ICL surgery typically ranges from \$4,000 to \$6,000 per eye. Despite the higher upfront cost compared to other vision correction procedures, EVO ICL represents a long-term investment in a patient's vision and quality of life.

Patients considering EVO ICL will find detailed information about the potential long-term savings associated with the procedure. Unlike glasses or contact lenses, which require regular replacements and ongoing maintenance costs, EVO ICL is a one-time investment that can reduce or eliminate these recurring expenses. By improving visual acuity and reducing dependence on corrective lenses, EVO ICL can enhance productivity and create new career opportunities, contributing to overall financial well-being.

The expertise of Lucent Vision's staff is a critical component of the patient experience. Led by Dr. Pathak, a board-certified refractive surgery specialist, the team is dedicated to providing comprehensive vision correction solutions with exceptional care. Dr. Pathak's extensive experience and success in performing vision correction procedures ensure that patients receive the highest level of care. This commitment to excellence is reflected in the clinic's investment in advanced EVO ICL technologies and the continuous training of its staff.

The article "Cost of EVO ICL in Long Beach" also explores how Lucent Vision helps patients navigate their financing options. Understanding that EVO ICL is often considered an elective procedure not covered by insurance, the clinic assists patients in exploring alternative payment plans. Options such as interest-free payment plans and healthcare credit cards, including Alphaeon, are designed to make the procedure more affordable. Patients can use their Health Savings Accounts (HSAs) or Flexible Spending Accounts (FSAs) to manage the costs effectively, leveraging pre-tax dollars to reduce the financial burden. The clinic also accepts payment methods such as cash, check, credit card, HRA, and MSA. This commitment to affordability ensures that patients can achieve their vision correction goals without undue financial strain.

Lucent Vision's commitment to transparency is evident in its approach to consultations. The clinic provides free, detailed consultations that include personalized cost estimates and payment options, ensuring that patients have all the necessary information to make an informed decision. By offering honest and upfront pricing, Lucent Vision eliminates the potential for unexpected costs, reinforcing trust and confidence among

its patients.

For more information about Lucent Vision and to read the full article, please visit the website or contact the clinic directly to schedule a consultation. Reporters seeking detailed information or wishing to arrange interviews are encouraged to reach out to Lucent Vision's media relations team.

Lucent Vision remains steadfast in its mission to provide top-tier eye care solutions and is proud to offer EVO ICL as a leading option for vision correction in Long Beach. By continuing to prioritize patient education and transparent communication, Lucent Vision ensures that patients receive the best possible care tailored to their unique needs.
