

Evans Leak Detection and Slab Leak Repair Launches Innovative Solutions for Orange County Homeowners

July 22, 2024

July 22, 2024 -

Evans Leak Detection and Slab Leak Repair has announced a new cost-saving solution for Orange County homeowners dealing with slab leaks. This new service focuses on re-routing the affected plumbing rather than using traditional, more invasive methods. With over 50 years of experience, Evans Leak Detection utilizes non-invasive technology to find and repair leaks efficiently and affordably.

Traditionally, fixing slab leaks can be a big job and expensive, often needing disruptive methods like jackhammering into a floor's concrete slab. Ron Evans, CEO of Evans Leak Detection, said, "We understand the inconvenience and cost associated with slab leaks. Our re-routing solution provides a less intrusive, more budget-friendly alternative for homeowners."

Using advanced techniques, Evans Leak Detection can accurately locate leak sources within a foundation's slab without causing much damage. This method saves time and minimizes disruption to the household. Once they find the leak, the team offers various repair options including re-routing, pass-through, direct

access, and epoxy, all done with great precision and care.

Besides repairs, Evans Leak Detection is an authorized installer of FLO by Moen leak detection devices, aiming to prevent future issues. These devices monitor continuously, alerting homeowners to potential leaks before they turn into major problems. This proactive approach shows the company's commitment to long-term solutions and customer satisfaction.

The company serves Orange County, Riverside, and South LA Counties and is available 24/7 to handle any leak-related emergencies. In addition to slab leaks, they offer services for main water line leaks, using the same non-invasive detection technologies. These comprehensive leak detection and repair services ensure that homeowners get timely and effective solutions for all kinds of leaks.

Customer satisfaction is very important to Evans Leak Detection. The company offers a flat rate for all slab leak repairs, with no hidden fees. If a customer isn't completely satisfied with the job, Evans Leak Detection promises to send a specialist to reassess and handle the issue. This customer-friendly policy has helped them earn high ratings and many positive reviews.

The services provided by Evans Leak Detection and Slab Leak Repair are especially helpful for residents in areas prone to slab leaks, like Orange County. These leaks often come from aging plumbing systems, ground shifts, or high water pressure. Given that these conditions are common in the region, having a reliable and experienced company like Evans Leak Detection is a big advantage for homeowners.

Ron Hoffmeyer added, "Our mission is to offer not just a service, but a trusted partnership with our customers. We aim to provide solutions that are not only effective but also considerate of our clients' homes and financial situations."

By offering free estimates and non-destructive leak detection, Evans Leak Detection ensures transparency and trust from the beginning. Interested homeowners can easily contact them by phone or through their website for a free quote.

The company's commitment to innovation and customer care sets it apart in a competitive market. By constantly improving their techniques and expanding their service offerings, they remain a reliable choice for those dealing with leak issues.

For efficient and cost-effective slab leak solutions in Orange County, Evans Leak Detection and Slab Leak Repair provides a comprehensive range of services. With their expertise and customer-focused approach, they are a valuable resource for maintaining the integrity of residential plumbing systems.

More information about their services, including the cost-saving re-routing solutions, can be found on their website. Evans Leak Detection in Orange, California remains dedicated to being a leader in the field of leak detection and repair, always evolving to meet the needs of their customers.
