

IMHO Reviews Artlist AI Voiceovers Video Release

July 19, 2024

AVENTURA, FL - July 19, 2024 - PRESSADVANTAGE -

The advent of AI-generated voiceovers has revolutionized the content creation industry, providing realistic, customizable voices that deliver a wide range of emotions. In a recently released video, Vitaliy Lano, founder of IMHO Reviews, commented on this transformation, highlighting how it has changed the landscape of voiceover creation. "Gone are the days of recording voiceovers in makeshift studios," Lano stated. "With tools like Artlist and Eleven Labs, creators now have access to high-quality voiceovers that can be tailored to fit any project."

Artlist recently introduced its AI voiceover tool, prompting a comparative analysis with Eleven Labs, a pioneer in this domain. Lano shared his experience using Artlist's new feature for a recent app promo video. "Selecting the right template and music was crucial," he explained. "Ambient tracks that wouldn't clash with the voiceover were key to creating a seamless blend of audio elements."

The ability to tweak AI-generated voices to match the tone and emotion of visual content was particularly praised by Lano. "This freedom to experiment ensures every shot looks its best," he added. Artlist's tool also simplifies the editing process, allowing creators to combine sound effects, music, footage, and voiceovers

effortlessly.

Artlist confirmed plans to expand its voice library, adding more voices and languages. Lano expressed excitement about these future enhancements, suggesting they will further enhance the tool's utility for various creators, from YouTubers to small businesses. "The potential for customization and variety is immense," Lano commented. "It's an exciting time for content creators who need professional voiceovers without breaking the bank."

This initial look at Artlist's new AI voiceover tool shows its promise and potential impact on the industry. Lano's insights provide a clear understanding of how this tool can benefit a wide range of users, setting the stage for a deeper comparison with its competitors.

As AI-generated voiceovers continue to revolutionize the industry, a comparative analysis between Artlist's new AI voiceover tool and Eleven Labs highlights the strengths and differences of each platform. Eleven Labs offers a broad array of voices and advanced voice cloning capabilities, which have set high standards in the market. Artlist, on the other hand, has focused on quality by utilizing professional actors for their AI-generated voices.

Lano noted that while Eleven Labs provides a wide variety of voices, Artlist excels in delivering superior quality. "Artlist's use of professional actors behind their AI-generated voices makes a significant difference," Lano stated. "This focus on quality ensures that the voiceovers are not only realistic but also emotionally engaging."

When it comes to pricing, Artlist offers its voiceover tool at \$11,99 per month, which includes 50,000 credits. In contrast, Eleven Labs' pricing ranges from \$5 to \$100 per month, with the most popular plan costing \$22 per month for 100,000 credits. However, this plan offers fewer credits for premium voices, making Artlist a cost-effective choice for high-quality voiceovers.

In the video, Lano also discussed Artlist's competitors. Artlist's position as a comprehensive solution for video creators brings it into comparison with platforms like Envato Elements and Epidemic Sound. Envato Elements boasts a vast array of assets, including 12 million items for all creative needs. Despite this, Artlist's curated library ensures faster production and higher-quality outputs, particularly in cinematic footage and authentic music. Lano commented, "Artlist's higher quality of music and stock videos, combined with a straightforward licensing process, makes it an invaluable tool for serious creators."

Epidemic Sound, known for its extensive music library, is often preferred by vloggers and influencers for its trendy tracks. However, Artlist's superior quality and authentic music make it ideal for creators seeking professional-grade audio. "Artlist's focus on high-quality, authentic music sets it apart from Epidemic Sound,"

Lano added. "It's the perfect choice for creators who need top-tier audio to match their visual content."
