

Blocked ICF Launches Nationwide Shipping for Energy-Efficient Construction Blocks

September 06, 2024

September 06, 2024 - PRESSADVANTAGE -

Blocked ICF, known for selling Insulated Concrete Forms (ICF) blocks, has expanded its operations to offer nationwide shipping across the United States. They provide a variety of ICF blocks at competitive prices, supporting contractors, architects, and homeowners with sustainable and energy-efficient building solutions.

Blocked ICF offers different types of ICF blocks, including Straight Blocks, Corner Blocks, 45 Degree Angle Blocks, T-Blocks, Fox Bucks for windows and doors, and HV Clips. Each type of block is designed to boost the efficiency and durability of building projects. Using ICF blocks can cut down energy consumption significantly, making them a great option for both commercial and residential buildings.

Chris Price, CEO of Blocked ICF, spoke about the company's dedication to providing high-quality construction materials. "Our goal is to make energy-efficient and sustainable building solutions accessible to everyone across the United States. By offering a comprehensive range of ICF blocks and ensuring they are easily available through nationwide shipping, we are supporting the growth of eco-friendly construction practices."

The Straight Blocks from Blocked ICF come in three widths (6.00", 8.00", and 10.00"), each block covering a surface area of 5.33 square feet. Corner Blocks also come in three widths, offering different surface areas and prices to fit various project needs. For specific angles, the 45 Degree Angle Blocks are available in two widths, giving flexibility in design and construction.

T-Blocks add more versatility, while Fox Bucks are designed specifically for windows and doors, making it easier to integrate these elements into ICF construction. HV Clips, sold at \$0.65 each, provide added stability to ICF structures, ensuring long-term durability.

"ICF blocks are not just a sustainable building solution; they also offer exceptional strength and durability,"

explained Chris Price. "Houses built with ICF exterior walls typically require significantly less energy for heating and cooling compared to traditional wood-framed homes. This translates to lower energy bills and a reduced environmental impact."

One major advantage of ICF blocks is their ability to create tightly sealed and well-insulated structures. The blocks interlock to form a solid wall, with concrete poured into the forms to create a sturdy and energy-efficient barrier. This construction method reduces thermal bridging, a common issue with traditional building materials, thereby boosting the building's overall energy efficiency.

Building with ICF blocks for exterior walls can save approximately nine trees per home, contributing to environmental conservation. Additionally, homes built with ICF blocks are 44% more energy efficient than wood-framed houses, further making them a sustainable building option.

Blocked ICF's commitment to sustainability goes beyond just their products. They also offer resources and support to their clients. On their Facebook page, Blocked ICF shares industry tips, project showcases, and other useful information to help contractors, architects, and homeowners with their ICF construction projects. To learn more about Blocked ICF and their products, visit the company's Facebook page at [Find Us On Facebook](#).

For more information about the various types of ICF blocks offered, such as the Straight Block, Corner Block, 45 Degree Angle Block, T-Block, and Fox Buck, as well as the pricing, visit their website. You can also find in-depth details and specifications for each type of block and learn how they can be integrated into different construction projects. Blocked ICF's website provides a comprehensive overview of their product offerings and how they contribute to eco-friendly building practices.

Blocked ICF remains focused on meeting the growing demand for sustainable building materials. By offering a range of products and convenient nationwide shipping, the company is ready to make a significant impact on the construction industry.
