

Jupiter Dentist Launches "Teeth In A Day"

January 15, 2016

January 15, 2016 - PRESSADVANTAGE -

Premier Dentistry of Jupiter, a clinic in Jupiter, FL, is proud to announce that they have launched a new procedure, known as "Teeth in a Day." This procedure uses implant retaining devices, which enable people to permanently say goodbye to their dentures. As a specialist in cosmetic and restorative dentistry, Dr. Dan Casel is uniquely qualified to deliver this kind of dental treatment. Meanwhile, Dr. Casel and his dental staff will continue to provide the same quality Jupiter dental services as always.

Dr. Dan Casel from Premier Dentistry of Jupiter explains: "Teeth in a Day is a cutting edge dental solution that entails the positioning of as little as four titanium implants into your jawbone that will act as supports for your new full set of teeth. These four implants are in effect very much like screws that act like the root of your tooth and were developed to help assist osseointegration. What that means, is they basically latch onto your bone cells and then aid in the promotion of healthy bone density as well as increase its volume."

The procedure involves a tolerable surgery during which the new implants are placed into the jaw bone. Next, the dentists will attach the tray that holds the patient's new teeth. This tray is known as an implant retaining device and holds new teeth in place. The teeth themselves look completely natural and have the same benefits as real teeth. Full details are available through the clinic's website at <http://www.premierdentistryofjupiter.com/>.

Patients have been incredibly positive about the treatment they have received at the clinic. "I love my new smile," says Nancy G. "You have made me one happy lady. Not only were the procedures painless, (and that's very important) but the professional and caring attitude shown to me by you and your staff was certainly appreciated. I feel most fortunate to have been a recipient of your expertise."

People are encouraged to learn more about the procedure through the clinic's website. A free, no obligation consultation can also be set up, during which patients can learn about how this procedure can benefit them and how it works.
