Forsight Vision Partners with Avulux to Offer Migraine & Light Sensitivity Lenses

October 25, 2024

LONG GROVE, IL

NORTHFIELD, IL - October 25, 2024 -
Long Grove and Glenview, IL ? Forsight Vision is excited to announce its partnership with Avulux, a leading developer of lenses designed specifically to help individuals suffering from migraines and light sensitivity. These innovative lenses are now available through Forsight Vision, providing a clinically proven, non-invasive solution for patients dealing with these debilitating conditions.

Avulux lenses are uniquely engineered to filter out harmful wavelengths of light that are known to trigger migraines, while allowing soothing green light to pass through. With the ability to fit into a wide range of frames?including prescription glasses?these lenses offer a seamless solution for those seeking relief without compromising style or comfort.

?With years of experience helping patients manage complex vision issues, I understand how debilitating migraines can be. That?s why I?m excited to introduce Avulux as a non-invasive, drug-free option to help reduce light sensitivity and the frequency of migraines. My priority has always been to improve quality of life

for my patients, and Avulux is a natural extension of that commitment,? said Dr. Todd Cohan, Practice Owner at Forsight Vision.

The Avulux lenses have been developed based on extensive research, taking over eight years of optical engineering and clinical studies to ensure their effectiveness. Unlike typical tinted lenses that may alter a person?s color perception, Avulux lenses selectively filter up to 97% of harmful blue, amber, and red light, while letting in beneficial green light. This approach not only reduces the likelihood of triggering migraines but also helps manage light sensitivity for a variety of patients, including those experiencing symptoms from digital eye strain. Avalux lenses allow users to use the glasses as either an acute or preventative measure, depending on the wearer's day-to-day activities and habits.

More than 80% of people living with migraines are affected by light sensitivity, which can either trigger or worsen their migraines. This makes effective light management essential for improving overall well-being. Patients suffering from these conditions are encouraged to visit Forsight Vision for a comprehensive assessment and learn how Avulux could be part of their long-term migraine management strategy.

Avulux?s lenses stand apart in the market, having undergone rigorous independent clinical testing. A randomized, double-blind placebo-controlled study demonstrated the effectiveness of the lenses in reducing the frequency and severity of migraine symptoms compared to clear lenses. Real-world experience further reinforces these findings, with approximately 90% of Avulux users reporting that the lenses enable them to return to everyday activities without the debilitating effects of light-triggered migraines.

The lenses are versatile, fitting into virtually any frame and available with or without a prescription, making them accessible to a wide range of patients. Additionally, Forsight Vision will ensure that patients receive expert guidance on selecting the right frames and lenses tailored to their individual needs.

About Forsight Vision:

Forsight Vision, located in Long Grove and Glenview, IL, provides exceptional eye care services to patients of all ages. With a focus on personalized care, cutting-edge technology, and a team of experienced optometrists led by Dr. Todd Cohan, Forsight Vision offers comprehensive eye health services.
