The Microneedling Revolution: EIPS Now Offering Cutting-Edge Skin Rejuvenation Treatments

October 25, 2024

Nicosia, Cyprus - October 25, 2024 -

Nicosia, Cyprus ? The European Institute of Plastic Surgery (EIPS), led by world-renowned plastic surgeon Dr. Demetris Stavrou, is proud to announce the expansion of its cosmetic services portfolio by introducing microneedling treatments. This revolutionary, minimally invasive procedure is designed to rejuvenate the skin and address various concerns, including fine lines, wrinkles, acne scars, hyperpigmentation, and uneven skin texture. EIPS, based in Nicosia, Cyprus, is at the forefront of European cosmetic surgery, offering patients the most advanced solutions to achieve youthful, radiant skin.

Microneedling, also known as collagen induction therapy, is a cutting-edge procedure that uses fine, sterile needles to create controlled micro-injuries in the skin. This triggers the body's natural healing process, stimulating the production of collagen and elastin?two proteins essential for maintaining smooth and firm skin. As a result, microneedling improves the skin's overall appearance and texture, leaving it looking revitalized and rejuvenated.

According to recent European statistics, non-surgical aesthetic procedures, such as microneedling, have seen a surge in demand. Reports show a 25% increase in microneedling treatments over the past year as

more individuals seek minimally invasive options for skin rejuvenation. This trend reflects a broader shift in the beauty industry toward non-surgical, natural-looking solutions for maintaining youthful skin without requiring more invasive procedures like facelifts or deep chemical peels.

?Microneedling is one of the most exciting developments in skin rejuvenation,? says Dr. Stavrou. ?It provides remarkable results by harnessing the body?s natural healing process. Patients can achieve smoother, younger-looking skin with little to no downtime. At EIPS, we offer the most advanced microneedling technology to ensure our patients' safety, comfort, and optimal results.?

At EIPS, microneedling is performed using the latest medical-grade devices to deliver precise and consistent results. Unlike traditional methods, modern microneedling technology offers greater control over needle depth and ensures that the procedure is safe and effective for all skin types. The treatment is customizable based on individual skin concerns, allowing patients to target specific areas or treat the entire face.

Microneedling is particularly effective for addressing the following skin issues:

Fine lines and wrinkles: By stimulating collagen production, microneedling helps reduce the appearance of fine lines and wrinkles, leaving the skin looking firmer and more youthful.

Acne scars: Microneedling breaks down scar tissue and encourages new collagen to form, helping to smooth out acne scars.

Hyperpigmentation: The procedure promotes cell turnover, improving uneven skin tone and reducing the appearance of dark spots and pigmentation.

Large pores: Microneedling helps to tighten the skin, reducing the size of pores and giving the complexion a more refined appearance.

Overall skin texture: Regular microneedling treatments improve skin texture by boosting collagen levels, resulting in smoother, softer skin.

EIPS ensures a virtually painless experience by applying a topical anesthetic before the procedure for those concerned about pain or discomfort. The treatment is quick, typically lasting 30 to 45 minutes, and most patients report only mild redness and sensitivity afterward, similar to a mild sunburn. These side effects usually subside within 24 to 48 hours, making microneedling an ideal option for individuals with busy schedules who want noticeable results without significant downtime.

Patients interested in learning more about microneedling at EIPS can book a personalized consultation with

Dr. Stavrou and his expert team. The team will assess the patient's skin concerns during the consultation and recommend a tailored treatment plan to achieve the best possible results.

For more information on microneedling and other non-surgical skin rejuvenation treatments, visit the EIPS official website to schedule a consultation.

The European Institute of Plastic Surgery (EIPS) is a premier plastic surgery clinic in Cyprus, founded and led by Dr. Demetris Stavrou.
