

Blair Mechanical Services Introduce Cost Effective, Energy Saving Air Conditioning to Their Clients

January 14, 2016

January 14, 2016 - PRESSADVANTAGE -

Blair Mechanical Services has added a new service to their company and it has been creating a buzz locally. The company is providing ductless mini split air-conditioning systems that can be used for cooling or heating and help people save on running costs.

Based in Kelowna, British Columbia, Blair Mechanical is a heating and air conditioning company that is widely popular in their locality. While having worked on many private and corporate projects, the company now offers an array of services that range from plumbing and air conditioning to financing and on-request services.

The company has recently launched a new product that allegedly helps people save on electricity costs every month. The product is a ductless mini split air conditioning system for heating and cooling homes on electric power. According to the company spokesperson, split systems help home owners have air conditioning in their home at a lower than average cost and cut down tremendously on the monthly electric bills.

The spokesperson for Blair Mechanical made a press statement about the company and gave details on how the ductless mini split air conditioning system works ?Here at Blair Mechanical, we have skilled and polite staff to do just about anything. Be it plumbing, heating or air-conditioning, we are always available on call and clients can make appointments with us ahead of time. We make sure to serve each and every client with the best quality of service so they get a bang for their buck.?

He further gave an in-depth analysis of the new air conditioning unit the company is providing ?We are now providing our clients with a very unique and cost effective method of air conditioning in comparison to conventional air conditioning. We are providing a ductless split air conditioning unit that works both ways, for cooling and for heating. The best thing about this 2-piece unit is that it consumes less electricity and helps cut down monthly electric costs. It is very low maintenance, thus saving the consumers the hefty amount of maintenance cost they would spend on conventional air conditioning units.?

More details about the company and their services can be seen on their official website at <http://www.blairmechanical.com/>.
