# Daylight AG Revolutionizes Educational Software in Switzerland with Precision and Flexibility

*December 19, 2024*

Winterthur, ZH - December 19, 2024 -
Daylight AG is excited to announce the ongoing development of its educational software solutions, showcasing Swiss precision and flexibility. The company provides a range of modular software designed to automate various administrative tasks in schools and other educational institutions. This includes managing school administration, course schedules, and exams, which together create a comprehensive system to make operations more efficient and effective. You can learn more about the depth of their offerings by visiting their website at daylight.ch.

A key feature of Daylight AG's software is how it simplifies administrative processes. With easy-to-use designs, it helps manage registrations, handle resource distribution, and even invoicing. By significantly cutting down on manual work, schools can focus more on providing quality education rather than getting bogged down by administrative tasks.

Marco Lendi, a spokesperson for Daylight AG, says, "Our software is about embracing efficiency and precision. With our solutions, schools and educational institutions can turn their focus towards enhancing learning experiences. Our commitment to adapting to the evolving needs of the Swiss educational system is unwavering."

Daylight AG's software doesn't just handle day-to-day tasks; it also stands out with its integration capabilities. It links smoothly with top financial and management platforms, making sure the transition between different systems is seamless. This means fewer disruptions and a steady flow of data, which is invaluable for any institution's administration.

Educational institutions can choose between cloud-based or on-premise versions of Daylight AG's software. This flexibility allows them to pick what suits their specific needs and IT systems. The cloud option means accessibility from anywhere, catering to the demands of an increasingly digital world. On the other hand,

on-premise solutions offer compatibility with existing systems without sacrificing data security and control.

The software also supports multiple languages, making it even more adaptable. This ability is particularly useful in Switzerland's diverse linguistic environment, and it helps institutions reach a wider audience and manage multicultural settings smoothly.

Beyond administrative tasks, Daylight AG's offerings also include marketing and CRM features. Schools can handle communication and marketing campaigns effectively, increasing their visibility and connecting with potential students. Plus, the option to set up online portals or e-shops for courses and seminars bridges the gap between administration and direct student interaction.

Daylight AG continues to expand its reach and efficiency with advanced tools for people and address management, course management, registration management, and more. More details about these features can be found on their page at https://x.com/daylightsoft.

The software integrates numerous services into one platform, including people and address management, event management, registration management, accounting, and resource distribution. These features highlight Daylight AG's dedication to covering all aspects of education and training operations.

Marco Lendi adds, "Daylight AG's rich software legacy is designed with a keen understanding of the intricate requirements of educational systems. We are dedicated to providing practical and sustainable solutions that cater to different educational structures, from small training centers to larger institutions."

In short, Daylight AG continues to strengthen its role in the educational software market. They provide advanced solutions tailored to meet the specific needs of the sector. By focusing on automation, adaptability, and integration, their software helps educational institutions efficiently manage and optimize their operations. With a Swiss background and a global perspective, Daylight AG remains a trusted partner in enhancing educational management systems.
