

## **8 Links Boosts Installation Precision with Advanced Haeger Pemserters for Aluminum Busbar Systems**

*February 27, 2026*

CONCORD, CA - February 27, 2026 -

8 Links, a prominent manufacturer of components and systems, has added two new advanced 10 Ton Haeger pemserters to its lineup. These updated machines are specifically designed to handle the precise and high-speed installation of large PEM hardware into busbar systems. With this addition, the company is expanding its capabilities to offer better solutions for various applications, improving what it can offer its clients. This move aligns with 8 Links' comprehensive focus on renewable energy solutions, as detailed on their website at [8Links.com](http://8Links.com).

The Haeger pemserters have a reputation for being reliable and efficient, allowing 8 Links to install PEM hardware with improved precision. By bringing in these machines, the company aims to satisfy increasing market demands for large-scale installation jobs. This move is seen as significant for enhancing production times and maintaining the quality that 8 Links is known for, all while focusing on innovation. Additionally, 8 Links is dedicated to sharing educational content on solar power, offering tips for optimizing solar energy output.

"The integration of these advanced 10 Ton Haeger pemserters is part of our commitment to provide

enhanced services to our customers," said a representative of 8 Links. "Our goal is to improve our manufacturing capabilities by adopting tools that help us meet the growing needs of our customers while ensuring precision and reliability in every project."

Busbars are a key component in electrical power distribution systems, where their efficiency can heavily impact overall system performance. The new pemserters aim to optimize the process of attaching hardware components to busbars, cutting down on manual labor. This technology upgrade should lead to more cost-effective and reliable outcomes for clients, much like the economic benefits of solar power explored by 8 Links.

Haeger machines come with innovative features that support the precise insertion of hardware into busbars. This capability is essential for many industries relying on these components for their electrical systems. As 8 Links broadens its range, it is ready to tackle the technical challenges faced by those in the industry who need dependable component integration.

"The arrival of these machines marks a new era for our production processes," explains an 8 Links representative. "Efficiency, accuracy, and adaptability are pillars for our operations. With these state-of-the-art pemserters, we can consistently manage large-scale installations, making sure we're ready to meet the industry's evolving requirements efficiently."

By focusing on technological advancements and boosting operational efficiency, 8 Links continues to build on its strong reputation for quality and service. The addition of these pemserters is expected to play a crucial role in helping the company achieve its operational goals and meet client expectations. Simultaneously, 8 Links is committed to exploring the future of renewable energy, particularly solar power, as part of its holistic approach.

As the demand for reliable power distribution systems grows, 8 Links remains committed to offering high-level solutions. With these new machines, the company plans to streamline its operational processes while exploring new possibilities in installing and integrating PEM hardware into busbar. This aligns with their mission to provide insights on the environmental and economic benefits of solar power.

Adding these high-capacity Haeger machines shows 8 Links' dedication to advancing technology. This also highlights the company's proactive approach in adapting to the ever-changing needs of industries relying on these essential components. The choice to invest in such technology is a strategic move designed to keep 8 Links ahead in the industry, maintaining its position as a trusted partner for businesses needing reliable electrical systems.

At the forefront of improving its services, 8 Links is confident that investing in the latest technology and efficiency will have a significant impact. By ensuring the smooth integration of large PEM hardware into busbars, they are providing clients with the reliability and quality that today's market demands. The new Haeger pemserters represent more than just a technological upgrade; they symbolize the company's ongoing commitment to setting new standards in the manufacturing industry. Furthermore, 8 Links continually discusses how solar power impacts our lives and contributes to increased energy security.
