ScalaHosting Expands SPanel Availability to Shared and Email Hosting

January 15, 2025

January 15, 2025 -
ScalaHosting has announced a major development in its ongoing pursuit of innovation and customer-centric services. Starting today, the company?s proprietary SPanel control panel will become available to shared and email hosting users. This strategic move represents a key milestone in ScalaHosting?s mission to redefine web hosting by offering powerful, cost-effective solutions tailored to the needs of its diverse customer base.

SPanel, which has been an integral part of ScalaHosting?s managed VPS and cloud hosting plans, will now be an option for users on shared and email hosting packages. The platform has earned praise for its user-focused design, robust feature set, and adaptability. By extending SPanel?s availability, ScalaHosting aims to provide all users with access to its cutting-edge management tools while maintaining affordability and transparency.

Existing shared and email hosting customers will have the first opportunity to adopt SPanel. Notifications with detailed instructions will be sent to eligible users starting January 15, 2025. ScalaHosting?s technical support team is prepared to handle the entire migration process at no additional cost. The transition is designed to be seamless, ensuring no disruption to services or loss of data during the migration. Customers who prefer the

cPanel interface can retain their current plans.

SPanel is designed and developed in-house by ScalaHosting, offering a unique alternative to third-party control panels. Unlike cPanel, which incurs licensing fees, SPanel is integrated into ScalaHosting?s services at no extra charge. This reduces costs for users and ensures greater predictability in hosting expenses.

However, cost savings are only one aspect of SPanel?s appeal. The platform addresses the complex needs of modern website owners, covering website management, email communication, and data security. Its intuitive interface makes it accessible to users of all experience levels.

What sets SPanel apart is its community-driven development model. ScalaHosting actively encourages users to suggest new features through a dedicated platform. Suggestions that gain significant traction are added to the development roadmap. This approach has resulted in practical tools that simplify web hosting management.

SPanel includes features such as business email management, a powerful file manager, database tools, and an automatic software installer for over 400 applications. WordPress and Joomla users benefit from specialized tools designed to enhance productivity and security. Additionally, SPanel provides effortless domain and DNS management, along with Cloudflare integration.

Security remains a priority for ScalaHosting, and SPanel reflects this with its SShield system, a real-time security solution that monitors websites and protects against cyber threats.

The deployment of SPanel in a shared hosting environment is a strategic move that reflects ScalaHosting?s commitment to innovation. By bringing its proprietary platform to a wider audience, the company is poised to gather feedback from new users, further refining the control panel. This collaborative approach underscores ScalaHosting?s dedication to delivering practical, user-driven solutions.

The introduction of SPanel to shared and email hosting highlights ScalaHosting?s focus on empowering users and advancing the web hosting industry. With a growing customer base and an evolving suite of services, ScalaHosting is well-positioned to set new benchmarks in hosting excellence.
