InfinityChem?s SR-9009 Stenabolic and Its Role in Circadian Rhythm and Energy Studies for US Research

January 31, 2025

Scottsdale, Arizona - January 31, 2025 -
InfinityChem has announced the opening of a dedicated research facility focused on the study of SR-9009, also known as Stenabolic, with particular emphasis on circadian rhythm and energy regulation. This facility is designed to collaborate with US universities, hospitals, and clinical research centers to investigate the applications of SR-9009 in the context of metabolism and energy studies. The research conducted here aims to contribute to the scientific understanding of how Stenabolic influences the body's internal clock and energy management, potentially impacting future therapeutic strategies and interventions.

The research facility at InfinityChem incorporates advanced equipment to support precise studies of SR-9009 in circadian rhythm research. Essential tools such as Jacketed Glass Reactors, Rotary Evaporators, and High Vacuum Distillation units are integral to the facility, enabling meticulous synthesis and facilitating the transition from laboratory experiments to scalable production. This infrastructure is essential for conducting detailed energy studies, allowing researchers to investigate the interactions of Stenabolic with biological processes under controlled conditions.

InfinityChem is also equipped to handle diverse custom synthesis tasks, which are vital for ongoing research

in energy regulation. The facility provides services such as target molecule synthesis, intermediate synthesis, and reference compound synthesis. A particular focus on solid-phase peptide synthesis supports biochemical research endeavors. These capabilities allow researchers to obtain the necessary compounds for detailed investigations into the effects of SR-9009 on circadian rhythms, enhancing the potential for scientific insights and advancements in understanding energy dynamics.

InfinityChem possesses expertise in designing synthesis pathways for bespoke chemicals, achieving high purity levels of 98% or more, which is critical for pharmaceutical and biochemical research. This capability supports the creation of precise chemical compounds necessary for detailed studies involving SR-9009. By optimizing synthesis pathways, researchers can obtain the high-purity chemicals required to explore the role of Stenabolic in circadian rhythm and energy regulation, ensuring that the compounds used in experiments meet stringent scientific standards.

InfinityChem provides contract manufacturing services that accommodate a range of scales, from lab-scale operations to productions using 200L reactors. This scalability ensures that projects of varying sizes, whether small or large, receive outputs that meet high-quality standards. These manufacturing capabilities are essential for producing compounds involved in energy studies related to SR-9009, facilitating research by providing consistent and reliable chemical supplies. Such infrastructure supports ongoing investigations into Stenabolic's applications, allowing researchers to maintain continuity across different phases of their work.

InfinityChem implements stringent quality control measures to ensure precision in the development of active pharmaceutical ingredients (APIs), intermediates, and other biochemical compounds. This rigorous approach supports research efforts, particularly in studies involving SR-9009, by maintaining high standards for the materials used. Through careful monitoring and verification processes, InfinityChem provides researchers with reliable compounds needed to explore the applications of Stenabolic in circadian rhythm and energy regulation, thereby supporting the consistency and validity of scientific studies.

InfinityChem's process chemistry research services include the optimization of synthetic routes and the facilitation of seamless transitions from laboratory research to production. This focus on efficiency ensures that the synthesis processes for compounds used in energy studies related to SR-9009 are scalable and effective. By refining production methods, InfinityChem aids researchers in minimizing waste and maximizing yield, thereby supporting investigations into the role of Stenabolic in biological systems. These services provide essential support for advancing research from initial laboratory experiments to broader applications.

InfinityChem provides procurement services that enable clients to source necessary research chemicals from a network of selected suppliers, supported by tailored analytical and logistics services. This capability ensures that the chemicals used in studies involving SR-9009 meet specific research requirements. By streamlining the procurement process, InfinityChem allows researchers to efficiently access materials

essential for exploring the role of Stenabolic in circadian rhythm and energy regulation, thereby supporting the continuity of scientific investigations.

InfinityChem is involved in the synthesis of nootropics in the United States, focusing on research into cognitive enhancement compounds that are important for neuroscience and related fields. This focus supports studies on SR-9009 by exploring its potential implications in cognitive function and energy regulation, which can provide insights into neurobiological processes. By concentrating on nootropic research and development, InfinityChem contributes to a deeper understanding of cognitive enhancement, offering valuable perspectives for various scientific disciplines.

InfinityChem continues to support the field of biochemical research through its dedicated facilities and comprehensive services. By focusing on SR-9009 and its role in circadian rhythm and energy regulation, the company collaborates with various universities, hospitals, and research centers in the United States. Through stringent quality control, advanced synthesis capabilities, and efficient procurement processes, InfinityChem provides researchers with the necessary tools and resources to advance scientific understanding. This commitment to precision and scientific inquiry highlights InfinityChem's involvement in contributing to the exploration of Stenabolic and its potential impacts on biomedical research.

InfinityChem

InfinityChem provides custom synthesis for research chemicals, lab and pharmaceutical industries.

We offer custom compounds and synthesis formula research.
