

Full Line Of RAID Storage Solutions Shown On New Website

January 25, 2016

January 25, 2016 - PRESSADVANTAGE -

RAIDking Technologies, Inc., a leading provider of RAID storage solutions, located in Lake Mary, FL, has announced the launch of their brand new website. The site features all of their latest RAID storage solutions, which is something that the world of technology has long been waiting for. Their Fibre Channel Storage System is proving to be particularly popular.

Troy S. Lasso from RAIDking Technologies, Inc. says: "State-of-the-art performance, an extreme level of reliability, unsurpassed user friendliness combined with the lowest price per terabyte anywhere, is what we offer through our latest storage systems. Our customers have trusted us and our capabilities for the past 18 years, and the new website is another step in the right direction."

RAIDking Technologies, Inc. has been in business since 1998. They pride themselves on their high quality products, affordable prices and superb customer service. All their products come with free lifetime tech support. They also ensure that all their products are incredibly user friendly.

Another highly popular item listed on the new website is the company's SAS Storage System. They have three series of storage systems available in this category. These systems are known for their reliability, high performance and affordable price. They are available in sizes ranging from 24 TB to 96 TB and are suitable for a wide range of applications. Customers can connect them directly to their host server, enabling the onboard microprocessors to provide their data the security and performance it deserves and needs.

A final, highly popular category of products listed on the new website is the iSCSI Storage System. "RAIDking Technologies' iSCSI to SAS / SATA III RAID storage solutions are designed specifically to fit anywhere from the smaller work group all the way up to the performance driven large server environment," adds Troy S. Lasso. "These ultra-reliable, high performance, yet affordable iSCSI RAID arrays are available for Windows, Linux and Mac operating systems. With a capacity of up to 96 TB these 1 or 10 Gbit/sec. iSCSI devices suit a highly versatile range of applications."

The new website is now live at www.raidking.com, and customers are encouraged to bookmark it to remain up to date with the latest product developments.
