Movassaghi Plastic Surgery Debuts Holistic Hair Restoration Treatment Program in Eugene, OR

January 28, 2025

EUGENE, OR - January 28, 2025 - PRESSADVANTAGE -

Eugene, OR?Eugene board-certified plastic surgeon Dr. Kiya Movassaghi and his team have launched a holistic hair restoration program to offer patients a comprehensive approach to hair revitalization. The program includes surgical hair restoration with NeoGraft, topical treatment with Benev exosomes and Sylfirm X RF Microneedling, and Nutrafol supplements to promote healthier scalp conditions and improved hair growth.

?We are very pleased to offer a holistic approach to hair restoration, which includes the tried and true NeoGraft technique for minimal-downtime hair restoration. With pre- and post-operative care with exosomes, RF microneedling & Nutrafol supplements, we can achieve optimal results,? commented Dr. Movassaghi.

This launch reflects the practice's commitment to cutting-edge solutions and personalized therapies.

"Not only are these treatments science-backed, but we've also seen firsthand how the best possible outcomes arise from addressing hair loss from multiple angles," said Dr. Movassaghi. "Our holistic hair restoration program was designed to give patients a complete and sustainable solution for achieving and maintaining thicker, fuller hair."

NeoGraft is a state-of-the-art hair restoration procedure that uses automated follicular unit extraction (FUE) to harvest and implant very small hair grafts with minimal incisions and fast recovery times. Compared with traditional strip grafting techniques, NeoGraft offers natural-looking results, minimal post-operative discomfort, flexibility to style hair however the patient chooses once the transplanted hair has grown in.

"My goal is always to maximize the patient's cosmetic outcome while ensuring they can return to their routine quickly and confidently," noted Dr. Movassaghi. "The beauty of NeoGraft is that it doesn't leave any linear scar, plus it allows for more precise and consistent graft extraction."

Another vital component of the holistic hair restoration treatment program is Benev Exosomes, a high-tech topical treatment known for regenerative and anti-inflammatory properties. By delivering highly concentrated growth factors to the skin and hair follicles, exosomes support cellular health, stimulate collagen production, and help reduce inflammation, all of which are integral to robust hair growth. Benev Exosomes can be applied in tandem with hair transplant procedures or used as a standalone therapy to encourage a healthier scalp environment.

"I've seen remarkable results with the addition of exosomes," said Dr. Movassaghi. "They help to optimize the post-procedure recovery process and enhance the results of our other therapies by encouraging tissue remodeling and nourishing the scalp at a cellular level."

Also included in the new program is Sylfirm X RF Microneedling, a combined treatment with radiofrequency energy with microneedling to enhance the penetration of exosomes and increased collagen stimulation. This dual technology delivers thermal energy into the deeper layers of skin through tiny, precisely targeted needles.

"RF microneedling has expanded our ability to achieve results on the scalp that were once only possible on the face, harnessing the skin's innate regenerative capabilities," Dr. Movassaghi explained.

Finally, to approach hair loss from an internal standpoint, Dr. Movassaghi recommends adding Nutrafol—a nutritional supplement that is clinically proven to improve hair growth. Nutrafol's formulation uses botanical ingredients that help create optimal conditions for healthy hair at the root, targeting factors like stress, hormones, and oxidative damage.

The synergy among these therapies?NeoGraft, Benev Exosomes, Sylfirm X RF Microneedling, and Nutrafol?offers patients a well-rounded treatment plan to address their specific concerns, whether they are at the early stages of hair thinning or seeking a more transformative approach.

?Combining these solutions enables us to offer a completely customized experience, one that promotes hair growth from every angle and helps patients feel confident in the longevity of their results,? Dr. Movassaghi said.

Every treatment plan begins with a thorough consultation and scalp assessment, allowing for tailored recommendations based on the patient?s needs and aesthetic goals. While results will vary, most individuals see significant improvements within a few months of consistent treatment, ultimately enjoying thicker, healthier hair that continues to look and feel natural.

Movassaghi Plastic Surgery, led by Dr. Kiya Movassaghi, is dedicated to providing state-of-the-art care in a welcoming, patient-first environment. In addition to hair restoration, the practice offers a wide spectrum of cosmetic and reconstructive procedures tailored to help patients feel their most confident.
