Kalos Medical Spa in Fort Worth Introduces Celluma LED Light Therapy

February 11, 2025

February 11, 2025 -
Fort Worth, TX?Kalos Medical Spa announced the addition of FDA-cleared Celluma LED light therapy to its aesthetic and wellness services. Celluma?s light therapy device uses innovative light-emitting diode (LED) technology to deliver blue, red, and near-infrared light energy to the skin. These wavelengths of light penetrate the skin at different depths, triggering natural cellular processes that help repair the skin and address a wide range of concerns, including fine lines, wrinkles, acne, pain and inflammation, and poor skin tone and texture.

?At Kalos Medical Spa, we believe in empowering our patients with treatment options that address their concerns with minimal downtime,? said Dr. Emily Kirby, Board-Certified Plastic Surgeon and Owner/Director of Kalos Medical Spa. ?Celluma aligns perfectly with this philosophy, allowing us to leverage the latest advancements in light therapy without taking time away from our patients? busy lifestyles.?

During the treatment, the Celluma device is positioned over the targeted area, emitting light that penetrates the skin and stimulates cellular activity. Sessions typically last between 20 and 30 minutes, though each Celluma LED light therapy session will be tailored to the patient?s specific needs. For optimal results, the

skincare specialists at Kalos may recommend a series of treatments, depending on the patient?s individual skin concerns and goals for treatment.

LED therapy is non-invasive, painless, and requires no downtime, making it an excellent option for individuals seeking effective skincare solutions without the need for surgery, injections, or interruptions to their daily routines.

?Celluma is easy to add to your routine and is highly effective for many frustrating skin concerns,? Dr. Kirby added. ?Whether you are experiencing acne breakouts or have stretch marks you want to diminish, LED therapy is likely a worthwhile addition to your skincare regimen.?

Celluma?s professional-grade devices are FDA-cleared and backed by scientific research. This means that, unlike at-home devices available from drugstores and beauty superstores, Celluma is specifically proven to work, and is trusted by aesthetic medical professionals and aestheticians for efficacy and safety.

?While LED therapy is one of the most versatile and approachable technologies that we have, it is important that patients know they are receiving a trusted treatment,? Dr. Kirby commented. ?As more and more devices become available at drugstores and online, I encourage patients to stick with the FDA-cleared options and, better yet, to use them under the guidance of our medical spa specialists.?

Kalos Medical Spa offers injectables, skin treatments, and non-surgical body contouring in their Fort Worth office, which shares a location with Kirby Plastic Surgery and City Surgery Center. Dr. Kirby oversees treatment plans at the medical spa, offering an extra layer of trust that all treatments are backed by science and administered with medically sound practices.

Dr. Kirby says that the LED light therapy is an example of a treatment that is well-suited for those looking to address skin concerns and prevent aging, as well as for those who have undergone more transformative surgical procedures and may benefit from the ability of LED therapy to promote healing and minimize scar appearance.

?We are also a plastic surgery center, and the healing process is critical to achieving ideal results after surgery,? said Dr. Kirby. ?With LED therapy?s benefits for healing post-procedure skin and reducing the appearance of scars, we are already recommending this treatment to patients with a wide range of needs in both our medical spa and plastic surgery center.?

Kalos Medical Spa is located within Kirby Plastic Surgery at 5075 Edwards Ranch Rd, Fort Worth, TX 76109.
