

# Mewtant Inc.'s PixAI Unveils Revolutionary AI Art Generator for Anime Creators and Businesses

*April 28, 2025*

April 28, 2025 -
Mewtant Inc., through its PixAI.art platform, has launched a major update to its PixAI AI Art Generator. This platform aims to transform how people and businesses connect with anime-style artwork. By using advanced artificial intelligence, it offers a flexible tool for creating unique anime art, whether for fun or for business.

PixAI has become an integral part of the global anime community. It's not just for fans; it also caters to creators and businesses. The PixAI AI Art Generator is popular for its easy-to-use design, allowing users to input their preferences and quickly generate unique artwork. This usability draws in both long-time anime enthusiasts and casual users.

While PixAI is an open space for creativity, Mewtant Inc. also focuses on supporting professional anime artists. The company keeps working on tools that help artists with their professional projects. Rissa Cao, COO of Mewtant Inc., mentioned, "We're committed to offering more than just tools. We provide a space where creators can expand their artistic boundaries while staying true to the essence and passion of anime art."

A key feature of PixAI.art is its ability to craft custom anime artwork that aligns with a client's preferences. This helps capture individual or brand identity effectively in the art. The impact of this personalized artwork is significant in both personal collections and commercial environments, where originality is crucial.

In a significant development, PixAI unveiled Haruka v2, its most advanced model to date, on April 2nd.This V2 model represents the platform's best performance to date with three major improvements. According to the release notes, V2 effectively addresses common issues with hands in AI art, generating more natural-looking hands that can accurately depict complex actions like holding objects or making gestures. The model also features more expressive eyes with optimized pupil highlights, eyelash layers, and eye-light distribution, making characters feel truly alive. As a specialized anime-style optimization, V2 enhances hair shine transitions and smoothes clothing wrinkles, delivering cleaner, higher-quality character art that meets professional standards.

Additionally, PixAI provides its advanced anime image models directly to business and enterprise customers through its PixAI Anime Image model API offering, available since 2025 at https://platform.pixai.art/, allowing for deeper integration. This suite of tools is especially useful for marketers and brand developers aiming to connect with audiences through engaging designs.

Visitors can explore https://pixai.art/ to experience these services for themselves. It's more than an art tool; it acts as a bridge between cutting-edge technology and traditional anime art. The platform's user-friendly design and community focus make it easy for users to connect and collaborate, creating a lively atmosphere for shared creativity.

Mewtant Inc. remains committed to pushing the boundaries of anime content using AI, exploring the global impact of these tools on anime artistic expression beyond mere aesthetics. Rissa Cao commented, "Our goal is to empower creators to produce unique content that draws more consumers to our platform. We strive to blend innovation with creativity. Each update to our AI models and tools aims to inspire a community of artists ready to embrace the creative possibilities of the future. Our long-term vision for Mewtant is to create an interactive platform where users can experience visually stunning content paired with compelling narrative."

The recent updates to the PixAI AI Art Generator open doors to new possibilities in anime-style art. As technology and artistic creativity continue to merge on platforms like PixAI, the potential for what can be achieved in art expands greatly. Cao says that Train LoRA now supports using Illustrious 2.0 as a base model, and that new models Haruka v2 and Hinata v2 has launched on April 28th and are available to all users on PixAI Platform. All users are welcome to try the new models using the PixAI AI Image Generator for free.

Through Mewtant Inc. and its platform PixAI.art, the hope is to keep strengthening the link between AI technology and the anime content creation process. Whether it's for personal stories or enhancing a brand's visual approach, these tools are designed to open new avenues for anime creative exploration. With a lively community and solid support for professional artists, PixAI showcases what happens when technology and creativity come together.
