

Christmas Air Conditioning and Heating Launches Professional Water Heater Installation and Repair Services Across Dallas-Fort Worth

April 02, 2025

FLOWER MOUND, TX - April 02, 2025 -
Christmas Air Conditioning and Heating is excited to announce the expansion of its services to include professional water heater installation and water heater repair throughout the Dallas-Fort Worth metroplex. As temperatures begin to rise in the early months of spring, the demand for efficient and reliable access to hot water remains a critical concern for homeowners and property managers. This strategic service expansion underscores the company?s commitment to addressing core home comfort needs with an emphasis on safety, dependability, and timely response.

The decision to add water heater installation and repair services by Christmas Air Conditioning and Heating comes after months of internal review and resource planning aimed at identifying key gaps in regional home utility maintenance. With water heaters being a crucial component of residential infrastructure, the timing of this launch aligns with both seasonal trends and consumer demand. While the area begins its transition away from winter heating requirements, issues with existing water heating systems often become more apparent due to increased usage patterns and the natural wear associated with shifting temperatures.

Kanon Van Guilder stated that the move was driven by a combination of customer inquiries and long-term strategic planning. ?Over the past several years, we?ve consistently received requests from homeowners who needed water heater support but didn?t know who to trust,? Van Guilder said. ?We felt it was time to formally enter this space with a full-service offering that upholds the standards we?re known for in the HVAC industry.?

Water heater installation services provided by Christmas Air Conditioning and Heating will include both tank and tankless systems, along with direct replacements for aging or failing units. The company?s technicians are trained and certified to assess capacity needs, code compliance, fuel source compatibility, and energy efficiency considerations for each individual property. These installations are backed by procedural safety measures and informed by region-specific installation protocols to ensure proper function and minimal risk of system failures.

In addition to new installations by Christmas Air Conditioning and Heating, the company will also be offering water heater repair services designed to extend the life of existing units and avoid the higher costs associated with full replacements. Repairs will address a range of common issues such as inadequate heating, inconsistent water temperatures, leaks, corrosion, and pilot light failures. All diagnostics will be performed using approved procedures to accurately identify root causes and prevent recurring problems.

This rollout reflects growing concerns among homeowners regarding rising energy costs and household water efficiency. Improperly functioning water heaters can contribute significantly to both water and energy waste, often going unnoticed until utility bills begin to climb. The new services are positioned to respond to these hidden inefficiencies, allowing customers to make data-informed decisions about whether to repair or replace a given unit.

Van Guilder emphasized the technical rigor behind the new service line. ?Our team has spent months in specialized training to ensure that we can provide top-tier diagnostics and installations. This isn?t just an add-on to our business. It?s a focused expansion rooted in professionalism and reliability.?

The launch of water heater services coincides with increased property transactions in the North Texas housing market, which historically sees a seasonal uptick in spring. As new homeowners move into older properties, demand for inspections and upgrades to water systems tends to increase. The availability of water heater repair and installation from an established regional provider offers added value to buyers seeking dependable mechanical systems during the home inspection process.

From an infrastructure standpoint, aging housing stock in areas such as Argyle, Flower Mound, Denton,

Prosper, Justin, Lewisville and surrounding areas, present a significant opportunity for proactive maintenance and system upgrades. Many homes in these areas still operate with water heaters approaching or exceeding their expected lifespan of 8 to 12 years. The company?s new offering is designed to help mitigate risks such as sediment buildup, safety valve malfunctions, and other common failure points associated with aging equipment.

Unlike seasonal HVAC concerns that are often dictated by temperature extremes, hot water accessibility is a year-round necessity. In multi-generational households or homes with high usage demands, even minor disruptions in hot water service can create significant inconvenience and hygiene concerns. The launch of dedicated water heater services by a company already known for heating and cooling work represents a logical step in delivering continuous indoor comfort solutions.

The company will also provide consultations for energy-efficient upgrades, helping homeowners compare traditional tank systems to newer tankless models. These conversations will include up-front cost considerations, available rebates, and long-term operating costs to support informed decision-making. While not all properties are suitable for tankless systems due to installation requirements or existing infrastructure, the company plans to provide clear guidance on the pros and cons of each option.

Van Guilder acknowledged that the water heater market is highly competitive but expressed confidence in the company?s ability to distinguish itself through quality workmanship and honest service. ?We?ve built our business on trust, and our approach to water heaters will be no different. We?re not here to sell unnecessary replacements or upsell complicated systems. Our job is to evaluate each situation, explain the options, and let the customer make the best choice for their household.?

To support this initiative, the company has invested in new equipment, training, and inventory management to ensure that common models and parts are readily available. Emergency repair services will also be extended to include water heater breakdowns, ensuring that critical failures receive immediate attention regardless of time or day. This operational flexibility is intended to minimize downtime for customers and restore hot water access as quickly as possible.

The decision to formalize water heater installation and repair also reflects a broader trend in the mechanical trades sector, where companies are increasingly offering integrated home comfort solutions that extend beyond traditional HVAC models. As homeowners seek fewer vendors and more streamlined service relationships, companies like Christmas Air Conditioning and Heating are adapting by broadening their skill sets and certifications to meet that demand.

All water heater services will follow strict safety guidelines and municipal code requirements, including appropriate permitting, ventilation planning, pressure relief systems, and disposal of old equipment.

Customers receiving installation or repair services will receive documentation confirming compliance with local building standards and manufacturer warranties where applicable.

Van Guilder noted that the service launch is just the beginning of a long-term vision. ?We want this to be a sustainable and evolving part of our business. That means staying current on technology, adapting to new regulations, and keeping our training up to date. Our goal is to be the go-to resource for homeowners who need fast, honest, and safe solutions for their water heating needs.?

With the Dallas-Fort Worth area continuing to experience population growth and housing development, the demand for professional water heater installation and water heater repair is expected to rise. By adding these services to its existing suite, Christmas Air Conditioning and Heating is positioned to meet that demand with the same consistency and operational excellence that has defined its presence in the region.

As the service area expands and customer demand is assessed over the coming months, the company will monitor performance metrics and customer feedback to guide further resource allocation and service refinement. Initial appointments will prioritize urgent repair needs, followed by routine upgrades and planned installations throughout the spring and summer.

Christmas Air Conditioning and Heating has served the Dallas-Fort Worth area with professional heating and cooling services built on technical expertise and customer trust. With the addition of plumbing and water heater installation and repair, the company expands its capabilities to meet more essential home comfort needs with the same attention to detail and reliability.
