

New LED Solar Lights With Motion Sensor Shown To Save Money

February 02, 2016

February 02, 2016 - PRESSADVANTAGE -

Light Speed Solar Tech has announced that their LED solar lights which are equipped with motion sensors have been proven to help people save money on their energy bills. The porch lights motion sensor is proving to be very popular, particularly with people who are committed to reducing their dependence on fossil fuels.

Jacob Rainwater from Light Speed Solar Tech says: "Our LED solar lights are designed to provide as much light as traditional motion sensor lights, but without the need to use traditional electricity. This means they are great for people who are committed to using sustainable energy, and equally so for those homes in locations where power outages are frequent."

The solar LED motion sensor light comes in a pack of two. It is highly multi-functional, with people reporting using it in a variety of locations across the home and garden. Common uses include porches, stairs, walkways, patios, gardens, fences and more. Most importantly, because these lights are powered by solar electricity, people feel more comfortable with installing multiple lights, as they do not have to worry about their electricity bills.

The lights have been very positively received by many people. "Amazingly bright lights," says one happy customer. "As dusk approaches the really bright light comes on. Then it dims to a normal level and as long as there is no motion it stays dim but still bright enough to see to unlock the door etc. Of course, as soon as motion is detected the high beams appear. At dawn the light goes out. It's a great feeling to have a bright light pointed at my front door all night [especially since I am not paying the electricity to keep a light on]. These are going to be my emergency hurricane lights also. For anyone living in a hurricane area ... these are a great idea."

The LED solar lights with motion sensor are designed to last at least 12 hours on a single solar charge. They are also fully waterproof and heatproof, making them suitable for any installation.
