

Combi Boiler Installation Shown To Be A Good Investment

February 04, 2016

February 04, 2016 - PRESSADVANTAGE -

LB Plumbing and Heating, a company based in London, United Kingdom, has released a new blog post that shows how investing in a combi boiler installation is a good idea. Most home owners do not even want to think about boilers as they are so expensive. However, according to the blog post, which can be found at <http://lbplumbingandheating.com/combi-boiler-installation-in-london-area-is-well-worth-the-investment/>, it actually makes financial sense to change to a combi boiler.

Ray Le Blanc of LB Plumbing and Heating says: "There are still so many people who have old boilers at home because they don't want to deal with the expense of replacing it. What they forget, however, is that these old boilers use a huge amount of fuel, skyrocketing their energy bills. Not just that, if and when they do break down, the cost of repair is tremendous. Installing a new combi boiler will actually show a significant return on investment."

One of the biggest reasons of switching to a combi boiler is energy efficiency. The blog post explains that 'the time is right' to make the switch now. Most people have gained a greater understanding about the fact that energy efficiency is vital to the survival of the planet, and switching to a new combi boiler is an important step

towards making a real difference for the environment.

"The United Nations Climate Change Conference took place in the first two weeks of December of 2015," adds Ray Le Blanc. "While this conference is held each year, this was the first time that a real sense of urgency was felt. Everybody needs to play a part in becoming less dependent on fossil fuels and something as simple as installing a combi boiler is a huge step towards achieving that."

Combi boilers have been becoming increasingly popular for a variety of reasons. While their energy efficiency is a major reason, they are also cheaper to install, maintain and repair. As a result, the official, governmental advice is now to switch to this type of boiler when possible. In so doing, people can make a real difference to both the planet and to their own finances, as the reduction in their energy bill is significant.
