MoldStar Remediation Shares Urgent Insight on Mold Risks After Sewage Backups in New Blog Post

April 14, 2025

MARIETTA, GA - April 14, 2025 -
Atlanta, GA ? MoldStar Remediation has published a new blog post aimed at helping homeowners and property managers understand the hidden risks of mold after a sewage backup. The post, titled ?Mold Infestation After Sewage Backups: Why Immediate Action and Reliable Help Matter,? explains how mold can spread rapidly after these events and why fast action is necessary to protect health and property.

The full blog can be read on the company blog.

Jeremy Shelton, founder and owner of MoldStar Remediation, wrote the piece to offer clear and honest advice about an issue that many people ignore or underestimate. He said, ?A sewage backup is more than just a mess. It?s a serious health risk that can lead to mold growing quickly and quietly in areas people don?t check often. Waiting even a day or two can make the problem harder to control.?

The blog explains that sewage backups often create moist conditions behind walls, under floors, and in hidden parts of a home or building. Mold spores can begin growing within 24 to 48 hours of exposure to this moisture. Because of this short window, Jeremy stresses that fast cleanup is not just important it?s critical.

?Mold doesn?t need a lot to grow,? Jeremy said. ?If there?s moisture and organic material, it will spread. After a sewage backup, you?re not just dealing with water damage. You?re dealing with bacteria, moisture, and the perfect conditions for mold. That?s why we always tell people don?t wait.?

The post also clarifies that not all water damage is the same. Clean water from a broken pipe is different from black water from a sewage backup. Jeremy explains that black water contains harmful bacteria and waste. It creates higher risks for illness and speeds up the growth of mold.

Sewage backups are common in homes with older plumbing or in areas where storm drains overflow. They also happen when tree roots damage sewer lines. No matter the cause, the result is the same fast cleanup is needed. The Mold Star Remediation team helps clients by inspecting all affected areas, removing damaged materials, and treating the space with safe mold-removal methods.

?People often think they can just bleach the area and move on,? Jeremy said. ?But mold needs to be fully removed, not just covered up. And when it comes from a sewage backup, you have to be even more careful. We follow proven steps to make sure the space is clean and safe.?

The blog reminds readers that mold can grow in places they can?t see. Mold behind drywall, under carpets, or inside vents can keep spreading even if the visible mess has been cleaned. That?s why professional help is important. Mold Star Remediation uses tools like moisture meters and thermal imaging cameras to find hidden spots before they cause more damage.

Jeremy said, ?People call us weeks after a sewage backup because they still smell something musty or their family keeps getting sick. We go in, and sure enough, mold has been growing under their floors or behind a wall. That?s why early action matters. It saves people time, money, and health.?

The blog also talks about signs of mold after a sewage backup. These include musty smells, discolored walls, new allergy symptoms, and ongoing sickness in the home. Jeremy says that if anyone suspects mold, they should call for an inspection. ?Even if you?re not sure, it?s better to be safe,? he said.

MoldStar Remediation serves the greater Atlanta area with mold inspection, mold removal, and water damage restoration. The company works with homeowners, property managers, and insurance providers. They are known for their honest assessments, fast response, and clear communication throughout the process.

With this blog, Jeremy hopes to educate more people about the hidden danger that follows a sewage backup. He wants readers to understand that mold is not just a stain?it?s a living threat that can impact air quality and

health.

Jeremy added, ?We?re not here to scare people. We?re here to help them understand what they?re dealing with and give them real solutions. The sooner they act, the better the outcome. That?s always our message.?
