New Real Estate Search Engine Optimization Services Launched

February 02, 2016

February 02, 2016 -
San Diego, CA digital marketing agency Local SEO Profit has recently launched a new service offering search engine optimization (SEO) specifically to real estate businesses. Their goal is to help real estate professionals enhance their visibility and ranking on the search engines, thereby ensuring buyers and sellers are able to find them. The service is already proving to be very popular.

"We want to be involved in niche-targeted SEO," says Roderick Luna from Local SEO Profit. "We feel that doing this enables us to better serve our clients, as it means we only have to focus on one area of specific knowledge. Our current focus is on the real estate world and we encourage any real estate professional, whether newly launched or having been in business for a long time, to contact us as soon as possible to see what we can do for them."

The company offers a completely free SEO analysis through their website. This enables interested parties to see what their current standing is and what could be done to improve on that standing. It will also show them what the effects of this improvement are likely to be in terms of their bottom line. Improved SEO means more traffic comes to a website, and more traffic, particularly targeted traffic, means more paying customers.

The service offered by Local SEO Profit has been very positively received by clients who have already signed up. "The world of real estate is cut throat," says Anthony A. "It is an interesting profession but that does mean that there are millions of people just like us out there, and getting found is therefore nearly impossible. Thanks to Local SEO Profit and their service, however, I found myself on the first page of Google in no time at all. I can't begin to describe what this has done for my bottom line."

Local SEO Profit wants to highlight the relevance of SEO in the current climate. More and more businesses think that they only need to focus on social media, but the reality is that 94% of website traffic is still directed to sites through SEO efforts.
