Fleet Cost & Care Expands Consulting Services as Premier Commercial Fleet Consultants

September 25, 2025

DETROIT, MI - September 25, 2025 -
Fleet Cost & Care has announced the expansion of its consulting services, describing its work with commercial fleet operations and related advisory support. The company states that it will pair consulting with its existing technology portfolio. With over 30 years in the industry, Fleet Cost & Care outlines a range of services that include software and mobile applications used for various fleet-management tasks.

Their Fleet Management Software is presented as a step-by-step digital workflow that uses real-time data inputs in place of paper forms. The system is intended to standardize processes such as scheduling, maintenance tracking, and invoicing. Integration options are available for organizations that need to connect the software with current tools. For further information about their fleet management solutions, visit the Fleet Cost & Care website.

As commercial fleet consultants, Fleet Cost & Care references software offerings such as NexGen, Atom, and Crane Management for heavy-equipment rental and related sectors. NexGen is described as a centralized platform with modules for job quoting, scheduling, resource allocation, and compliance tracking within a single system. This consolidated approach is designed to support consistent data entry and unified

record-keeping across departments.

Jeff Curran, a spokesperson for Fleet Cost & Care, explained the company?s stated mission: ?Our main goal is to provide tools that help teams manage fleet information in one place. By offering centralized fleet management software such as NexGen, organizations can access the same operational details across the office and the field for greater visibility into day-to-day work.?

The company?s mobile app, Atom, is used by field personnel to complete inspections, attach photos, and collect signatures on site. Information captured in the app syncs with office systems to keep job and equipment records aligned. The interface is designed to surface required fields and checklists for consistent documentation. More details about these features can also be found on their website.

Safety-related administration is addressed through software modules that track certifications, compliance requirements, and safety checklists. These tools enable organizations to document procedures, store acknowledgments, and maintain audit trails within a central record system. Configuration can be adjusted to reflect company policies and industry standards.

Fleet Cost & Care notes that it provides implementation assistance, training, and customer support alongside its software. Programs focus on system setup, role-based workflows, and administrative configuration so teams can use the technology in accordance with internal processes. Support resources are available for ongoing questions and updates.

Jeff Curran added, ?Our dedication to customer success is long-standing. By offering ongoing support and training, we aim to help clients incorporate our tools into their day-to-day activities and keep project stakeholders working from the same set of information.?

Fleet Cost & Care?s consulting services, include reviews of fuel use, analysis of travel and routing data, maintenance planning, and procurement advisory for equipment and vehicles. Engagements can include software configuration as well as process mapping and documentation, depending on client requirements.

For organizations examining updates to fleet operations, Fleet Cost & Care outlines a combination of software and consulting services intended to address common coordination, scheduling, documentation, and planning needs. This combined approach is presented as a way to align people, processes, and data for clearer oversight of fleet work.

Fleet Cost & Care?s role as commercial fleet consultants, paired with its centralized fleet-management

software, is described as supporting businesses across the country in managing fleet information and workflows. The company indicates it will continue to develop tools and guidance for operators in equipment-intensive industries. Visit their website to find out more about their solutions.
