Brooks Eye Associates Offers PanOptix Pro Lens for Cataract Patients

May 15, 2025

PLANO, TX - May 15, 2025 -
PLANO, TX - Brooks Eye Associates has announced that it is now offering the Alcon PanOptix® Pro Lens, a next-generation advancement in cataract surgery. This state-of-the-art intraocular lens (IOL) is the first and only presbyopia-correcting trifocal IOL in the United States enhanced with new, image-refining technology. The lens is designed to provide patients with seamless vision across all distances?near, intermediate, and far?with less glare and fewer visual disturbances than traditional trifocal lenses.

Dr. Dain B. Brooks, M.D., a renowned ophthalmologist at Brooks Eye Associates, commented on the breakthrough, saying, ?The PanOptix Pro Lens represents a leap forward in cataract treatment. It?s not just about removing cataracts?it?s about restoring a full range of vision and reducing reliance on glasses. With superior light utilization and contrast sensitivity, this lens helps our patients see more clearly, more naturally, and with fewer compromises.?

Brooks Eye Associates is one of a select group of practices across the country that has been chosen to offer the PanOptix Pro Lens. The practice combines this groundbreaking lens technology with the Clareon® AutonoMe® automated delivery system, ensuring precise and controlled lens placement for optimized outcomes. From advanced diagnostics to personalized post-operative care, every stage of the process is designed to enhance both safety and visual performance.

Brooks Eye Associates? commitment to innovation is matched by its dedication to patient education and empowerment. The team takes the time to walk each patient through their treatment options, answer questions in detail, and provide medically sound and easy-to-understand guidance. This transparency is a cornerstone of the practice?s approach and one of the reasons they?ve earned a reputation throughout Plano and the surrounding areas as a trusted resource for advanced cataract care.

This innovative lens delivers 94% light utilization?an industry-leading figure among trifocal IOLs?and features just half the light scatter of the original PanOptix model. The result is a lens that delivers greater image contrast, particularly between intermediate and distance vision, critical for daily activities like driving and

working on digital screens.

In addition to the superior optics, Brooks Eye Associates leverages cutting-edge surgical planning tools and diagnostic systems to ensure candidates receive the most appropriate lens for their unique anatomy and lifestyle. The result is highly customized care designed to reduce dependence on glasses while enhancing the quality and clarity of vision across all distances.

Not every cataract patient is automatically a fit for the PanOptix Pro Lens, which is why a thorough consultation is essential. The experienced team at Brooks Eye Associates works closely with each patient to understand their visual goals and develop a tailored treatment strategy. From the first diagnostic exam to final post-operative follow-up, the practice delivers a comprehensive experience grounded in precision, expertise, and compassionate care.

Brooks Eye Associates is now scheduling consultations for patients interested in the PanOptix Pro Lens and other advanced cataract treatment options.
