T&T Plumbing, Heating, Air Conditioning, & Geothermal Now Offers Ductless Mini Split Maintenance in Garrett, IN

July 31, 2025

LAOTTO, IN - July 31, 2025 -

Garrett, IN ? T&T Plumbing, Heating, Air Conditioning, & Geothermal, a leading HVAC and plumbing provider in Northern Indiana, is proud to announce the launch of a dedicated service for ductless mini split maintenance in Garrett, IN. With the popularity of ductless systems continuing to rise, the company is offering this new service to help homeowners preserve the performance, efficiency, and longevity of their ductless HVAC units.

Ductless mini split systems are celebrated for their efficiency and convenience, particularly in homes or commercial buildings where traditional ductwork is not feasible. However, like all mechanical systems, they require regular maintenance to operate effectively. Neglecting routine care can lead to decreased performance, higher energy bills, and the premature failure of system components.

?We?ve seen a growing number of homeowners in Garrett turning to ductless systems because of their energy savings and zoning capabilities,? said Tyler Harrell, Owner of T&T Plumbing, Heating, Air Conditioning, & Geothermal. ?But many people are unaware that without proper maintenance, even the

best ductless units can suffer from performance issues. Our new service ensures these systems continue running smoothly for years.?

T&T?s ductless mini split maintenance service includes a comprehensive inspection and cleaning of all system components. This typically involves checking the refrigerant levels, cleaning or replacing air filters, inspecting the condensate drain, evaluating electrical connections, and ensuring the indoor and outdoor units are free of dust and debris. These tasks are critical to maintaining system efficiency and preventing small issues from escalating into costly repairs.

With proper maintenance, ductless mini split systems can operate efficiently for up to 20 years. However, failure to perform even basic upkeep?such as changing filters or checking refrigerant lines?can drastically reduce that lifespan. Harrell emphasizes that routine maintenance not only helps avoid unexpected breakdowns but also ensures the unit maintains optimal energy efficiency, saving homeowners money on their utility bills.

?One of the key advantages of ductless systems is their efficiency,? Harrell noted. ?But if they?re clogged with dust or low on refrigerant, that efficiency disappears. Our maintenance service is designed to protect that investment by keeping systems running at peak performance.?

The new offering aligns with T&T?s broader mission to provide complete comfort solutions tailored to the needs of modern households. With more families working and learning from home, maintaining a comfortable indoor environment has never been more important. Preventive HVAC maintenance plays a vital role in ensuring reliable, year-round comfort.

In addition to technical services, T&T?s team also educates homeowners on best practices for keeping their ductless mini split systems in good condition between visits. Customers receive personalized advice on how often to clean filters, what signs to watch for that might indicate a problem, and when to call for service.

The maintenance program is available to both residential and light commercial customers throughout Garrett and the surrounding area. By offering this service locally, T&T provides homeowners with a trusted, professional alternative to lesser-known or out-of-town HVAC providers.

?We?re not just here to fix things when they break?we want to help customers prevent problems in the first place,? Harrell added. ?Offering regular maintenance for ductless systems is a natural extension of the high-quality, responsive service our clients have come to expect.?

T&T?s new maintenance service is designed to be convenient and affordable. Customers can schedule a one-time tune-up or sign up for ongoing seasonal maintenance to ensure their system remains in top shape

throughout the year. The company recommends servicing ductless mini split systems at least once annually, ideally before the heating or cooling season begins.
