ClearSight Offers PanOptix® Trifocal Lens for Cataract Surgery and Custom Lens Replacement, Delivering Clear Vision at All Distances

May 29, 2025

PLANO, TX - May 29, 2025 -
ClearSight, a leading provider of advanced vision correction solutions, is now offering the PanOptix® Trifocal Intraocular Lens (IOL) for patients seeking high-quality outcomes from cataract surgery or Custom Lens Replacement (CLR). As an FDA-approved trifocal lens, the PanOptix lens gives patients the ability to see clearly at near, intermediate, and far distances, reducing or eliminating the need for glasses. This offering reflects ClearSight?s continued commitment to delivering top-tier technology and care to patients who want more freedom and clarity in their everyday lives.

Manufactured by Alcon, the PanOptix IOL uses ENLIGHTEN Optical Technology to distribute light across three focal points, creating seamless vision at all ranges. It is especially well-suited for patients who want to improve their ability to read, use digital devices, and drive without switching between multiple pairs of glasses. Unlike standard monofocal lenses, which only correct vision at one distance, PanOptix provides a full range of vision correction and is also available in a toric version for those with astigmatism. Clinical data has shown that more than 99% of PanOptix users would choose the lens again, a strong indicator of patient satisfaction and visual improvement.

ClearSight has integrated PanOptix into both cataract surgery and Custom Lens Replacement procedures, helping a broad spectrum of patients achieve long-term vision correction. CLR is an elective procedure in which the natural lens is replaced to reduce dependence on glasses and contacts while preventing future cataract development. This is a particularly attractive option for patients in their 40s to 60s who are not yet candidates for cataract surgery but are experiencing the effects of presbyopia. Recovery is generally fast, with most patients noticing significant vision improvement within 24 to 48 hours and continued visual adaptation in the following weeks.

The safety profile of the PanOptix lens is backed by FDA approval and extensive clinical trials. While some patients may initially experience mild glare or halos around lights at night, these effects tend to diminish as

the brain adapts. PanOptix is recognized for maintaining strong contrast sensitivity and night vision performance, giving patients more confidence and comfort in low-light situations. ClearSight ensures that all patients are fully informed of the benefits and limitations of the lens prior to surgery, conducting thorough evaluations using advanced diagnostic tools to determine candidacy and tailor each treatment plan to individual needs.

With the introduction of the Clareon PanOptix IOL in 2022, Alcon enhanced lens clarity and long-term performance by using an improved material that resists glistenings?tiny imperfections that can affect visual quality. ClearSight offers both the original and Clareon versions of the PanOptix lens to accommodate diverse patient needs. This innovation positions ClearSight at the forefront of modern vision care, where precision and long-term outcomes are key.

One of the most common questions ClearSight receives is whether PanOptix will fully eliminate the need for glasses. While most patients enjoy near-total freedom from eyewear, some may still use glasses for very specific tasks. Still, the convenience and quality of vision with PanOptix dramatically reduce reliance on visual aids in everyday life. Patients frequently report enhanced independence, whether reading menus, working on computers, or enjoying outdoor activities without the interruption of glasses or contact lenses.

ClearSight is transparent about the financial aspect of the procedure. While Medicare and most insurance plans cover standard cataract surgery, premium IOLs like PanOptix are considered elective upgrades and typically involve an out-of-pocket investment. ClearSight provides guidance on insurance benefits and offers financing options to help patients access the technology that fits their vision goals. The practice emphasizes that investing in long-term visual freedom can also reduce the ongoing costs associated with prescription glasses and contact lenses.

Choosing the right IOL is a personal decision that depends on lifestyle, expectations, and overall eye health. ClearSight?s patient consultations are designed to educate and empower. By combining medical expertise with the latest in vision correction technology, ClearSight helps patients make informed choices that align with their long-term visual goals.

With increasing demand for advanced IOL options that match active, modern lifestyles, the PanOptix Trifocal Lens is gaining recognition as a reliable and effective solution. Patients interested in learning whether PanOptix is the right option for their vision correction can schedule a consultation through ClearSight?s website or by calling the practice. As a trusted name in ophthalmology, ClearSight remains committed to helping patients achieve clearer vision and greater freedom with leading-edge technology like PanOptix.
