Lee?s Summit Welcomes SightWork Vision Rehabilitation for Vision Therapy

May 27, 2025

May 27, 2025 -
Lee?s Summit, MO ? SightWork Vision Rehabilitation is pleased to announce the opening of its brand-new location in Lee?s Summit, Missouri, bringing dedicated vision therapy services to the community. Led by the doctors of Eyecare Specialties, SightWork specializes in vision rehabilitation, providing solutions for patients of all ages struggling with visual impairments.

?We are excited to bring vision therapy to Lee?s Summit,? said Dr. Susan Lake, O.D., of SightWork Vision Rehabilitation. ?This specialized service is not widely offered, and our team is passionate about helping patients of all ages improve their quality of life through personalized care.?

Dr. Lake is board-certified in vision development and vision therapy, with extensive experience treating both pediatric and adult patients. She is known for her ability to explain complex vision conditions in an approachable way, whether she?s working with a child struggling in school due to a vision-related learning difficulty or helping an adult recover from a concussion-related visual impairment.

?Our mission is to make a meaningful difference in the lives of our patients,? said Dr. Starman, O.D., an expert in vision therapy and pediatric vision care. ?By restoring vision, we help individuals regain confidence and independence, which is truly life-changing.?

Many eye care providers do not offer dedicated vision therapy, leaving patients with limited options for treating conditions like eye strain, double vision, convergence issues, and visual processing difficulties. SightWork Vision Rehabilitation fills this gap by offering non-surgical, evidence-based treatment programs designed to retrain the brain and eyes to work together more effectively.

Vision therapy is a structured, doctor-supervised program that involves targeted exercises, specialized equipment, and interactive techniques to improve the connection between the eyes and brain. It is used to help patients with a variety of conditions, including amblyopia (lazy eye), strabismus (eye misalignment), convergence insufficiency, visual processing disorders, post-concussion visual disturbances, and digital eye

strain. Unlike traditional eyewear or surgery, vision therapy focuses on the brain?s ability to adapt and strengthen visual function over time. By improving the fundamental mechanics of the visual system, SightWork helps patients enhance coordination, reading speed, and overall clarity.

?Restoring vision is about more than just seeing clearly?it?s about improving the way patients interact with the world,? said Dr. Lake. ?Whether it?s a child struggling with reading, an adult facing challenges at work, or an athlete looking to refine their visual skills, vision therapy provides the tools needed for success.?

SightWork Vision Rehabilitation?s team utilizes cutting-edge diagnostic tools to develop personalized therapy programs tailored to each patient?s unique needs. The new Lee?s Summit location is designed to provide a comfortable and welcoming environment where patients can receive expert care in a supportive setting.

SightWork Vision Rehabilitation is now welcoming new patients for comprehensive vision therapy evaluations and treatment plans. To schedule an appointment or learn more about available services, visit www.SightWorkVision.com or call 816-434-1693.

About SightWork Vision Rehabilitation

SightWork Vision Rehabilitation is dedicated to helping patients of all ages achieve better vision through personalized therapy programs. As a specialized branch of Eyecare Specialties, SightWork focuses on non-surgical, doctor-led vision rehabilitation to address conditions such as binocular vision dysfunction, convergence insufficiency, amblyopia, and visual processing issues. By combining advanced technology with individualized care, SightWork provides effective solutions for patients seeking improved visual function and quality of life.
