

CENTERLINE CEO Chuck Perret to Attend AIA Conference on Architecture 2025 and Exhibit Their Leading Architectural Project Management Software

June 02, 2025

June 02, 2025 -
CENTERLINE, a leader in architectural project management software, has announced its participation in the AIA Conference on Architecture & Design® 2025 (AIA25), to be held June 4?7 in Boston, Massachusetts. CEO Chuck Perret will attend the event on behalf of CENTERLINE, which will also be a featured exhibitor at the AIA25 Expo.

AIA25 is widely recognized as the premier event for professionals across the architecture, engineering, and construction (AEC) industries. The four-day conference brings together thought leaders and practitioners from around the world for immersive learning, cutting-edge keynote sessions, architect-led tours, and one of the largest industry expos of its kind.

As an exhibitor, CENTERLINE will be among more than 600 brands showcasing solutions and services that support better project outcomes and innovation in the built environment. The conference?s emphasis on

discovery, experimentation, and forward-thinking design aligns strongly with CENTERLINE?s mission to simplify and modernize how architects manage complex projects from start to finish.

?CENTERLINE was designed to meet the real-world needs of architects managing projects in an increasingly digital and fast-paced environment,? said Chuck Perret, CEO of CENTERLINE. ?We?re thrilled to be part of AIA25 ? an event that brings together the most forward-thinking minds in our industry. I?m excited to engage with other professionals and demonstrate how CENTERLINE?s architectural project management software is helping teams work smarter, communicate more clearly, and stay on track at every project phase.?

This year?s AIA Conference is expected to draw thousands of attendees from across the U.S. and beyond, including architects, designers, engineers, contractors, and firm leaders. With its expansive program, AIA25 offers attendees the chance to explore Boston?s architectural landscape through exclusive tours, earn continuing education credits, and connect with peers during curated networking events.

Attendees can visit the CENTERLINE booth (#1469) at the AIA25 Expo to learn more about its comprehensive software platform designed specifically for architectural project workflows. With more than 12,000 users and over 800 active projects representing $4.1 billion in construction value, CENTERLINE is increasingly recognized for its robust capabilities and user-friendly design.

CENTERLINE offers flexible solutions for firms of all sizes. For individual projects, CENTERLINE COMPLETE provides a turnkey, fully supported experience with unlimited users and data ? ideal for project teams seeking a fast, admin-assisted rollout. For firms looking to standardize project information management across all their work, CENTERLINE PRO delivers an enterprise-level annual subscription model that enables organization-wide collaboration and oversight.

From design through closeout, CENTERLINE serves as a centralized hub for all project data and communication. During the design phase, it simplifies file sharing and task management to keep teams aligned. Its bid and procurement tools help streamline the distribution and submission process, while integrated features support construction administration workflows like RFIs, submittals, and change orders. For closeout, the platform facilitates punch list management, final documentation, and turnover deliverables ? helping teams close projects efficiently and accurately.

By providing a single point of truth throughout the project lifecycle, CENTERLINE?s cloud-based platform for architectural project management helps reduce errors, minimize delays, and improve collaboration among all stakeholders.

Conference attendees are encouraged to stop by CENTERLINE?s booth, #1469, during the AIA25 Expo to experience the platform in action and learn how it can support better project delivery and communication

across design teams, consultants, and contractors.
