

Neopure Highlights How Proprietary Water Purification Technology Helps Protect Environment

February 09, 2016

February 09, 2016 - PRESSADVANTAGE -

A business in Stafford, TX, is drawing attention to its proprietary water purification technology and its benefits, particularly on its minimal environmental impact. Since having recently partnered with Rockwater Energy Solutions, a lot of attention has been drawn to the company and they are keen to explain what the specific benefits of their proven technology are. In so doing, they also aim to make a bigger positive impact on the planet's environment as a whole.

Dean Themy, CEO of Neopure, says: "Since partnering with Rockwater Energy Solutions, people are starting to pay attention to how our water purification technology can reduce environmental impact by using electro-oxidation processes that do not use hazardous chemicals. We are happy to point them in the direction of our various pieces of proven technology, designed to leave behind a cleaner, more sustainable planet."

To make the water purification industry as a whole more accessible and easier to understand for everyday people, the company has also launched its Facebook page. Here, they share industry news relevant not just to their technology, but also to various water purification processes. Additionally, it is an opportunity for people to ask questions, share their own knowledge and generally get involved in conversation. Interestingly, the page is also being used by people to review the company and its technology, further drawing attention to its many benefits.

"I have invested in the Neopure EO and I am so glad that I did," says Sean S. "This system is a single solution approach that I now use in my wastewater treatment. Additionally, I have used it on my traditional methods, and their efficiency has been greatly improved ever since. What I really like about the Neopure EO is that it comes with a number of different sterilizers, generators and anodes, all of which are both manufactured and serviced by the company itself. This, to me, guarantees their quality and means that, if I do ever have an issue, it can easily be resolved."

People are encouraged to contact Dean Themy (CEO) if they have any questions about the Neopure technology and how it can benefit them in their water treatment equipment and processes. He will also be

more than happy to discuss which technologies will be most beneficial.
