Coin Bureau Releases 2025 Guide to the Best Crypto Wallets as Demand for Self-Custody Surges

June 09, 2025

June 09, 2025 -

Dubai, United Arab Emirates ? June 9, 2025 ? Coin Bureau, the most trusted source in the cryptocurrency industry for educational content, has released its Best Crypto Wallets in 2025 report. The extensive guide analyzes and compares leading wallet options across hardware and software categories to help users navigate the increasingly complex self-custody landscape.

The 2025 edition highlights 10 wallet solutions that have distinguished themselves through innovation, security, usability, and multichain support. Among the featured wallets are well-known names like Ledger Nano S Plus, Trezor Model T, MetaMask, Trust Wallet, and Coinbase Wallet, as well as newer contenders such as Tangem, SafePal S1, NGRAVE ZERO, Exodus and Zengo. Each was selected for its standout performance in categories like cold storage, mobile-first access, NFT support, staking, or advanced security design.

As the crypto industry continues to mature, Coin Bureau?s report arrives at a pivotal moment for users worldwide. Over the past year, increased scrutiny of centralized exchanges, high-profile scams, and a renewed emphasis on asset sovereignty have driven many users toward personal custody solutions. The

wallets covered in this year?s guide reflect that shift, offering improved user experiences while maintaining strong security principles.

?In a year marked by increased phishing attacks, wallet drainers, and the rising need for self-custody, choosing the right crypto wallet has never been more important,? CEO Nic Puckrin said. ?This guide is designed to help users understand the strengths and limitations of the top wallets in 2025.?

The full report includes detailed breakdowns of each wallet?s design philosophy, recovery mechanisms, supported chains, security architecture, DApp compatibility, and pricing. Hardware wallets such as Ledger Nano S Plus and Trezor Model T remain top choices for cold storage, while app-based wallets like Zengo and Trust Wallet stand out for on-the-go access to DeFi and NFTs. SafePal S1 and NGRAVE ZERO, both air-gapped devices, offer specialized solutions for users seeking maximum offline security.

Wallets like MetaMask and Coinbase Wallet continue to dominate among users active in decentralized applications. MetaMask's growing support for non-EVM chains through MetaMask Snaps, combined with its native staking and DApp features, keeps it at the forefront for Ethereum-based activity. Meanwhile, Coinbase Wallet offers an excellent onboarding path for users transitioning from centralized exchanges.

?As digital assets go mainstream, the responsibility of secure asset management is shifting to individual users. We built this guide to empower them. Whether you're storing crypto for the long haul or actively trading NFTs and tokens, the wallet you choose is the foundation of your security,? Puckrin said. ?Our goal with this report is simple: give readers a clear, trustworthy framework to evaluate the most secure and practical tools available.?

The guide also acknowledges the growing trend of seedless wallets, highlighting Tangem and Zengo as two of the most prominent examples of modern wallets moving beyond the traditional recovery phrase model. These solutions aim to reduce user error while still offering strong encryption and backup alternatives, such as biometric authentication or multi-card recovery.

Each review includes ideal use cases, network and token compatibility, NFT handling, in-app purchase or swap functionality, recovery options, pricing, and standout features such as 2FA support or open-source audits.

Coin Bureau?s Best Crypto Wallets in 2025 guide reflects the platform?s ongoing mission to demystify crypto tools and help users make informed decisions in an increasingly technical environment. With side-by-side comparison and expert guidance, the article serves as a go-to resource for anyone serious about digital asset self-custody in 2025.
