Swiss Innovation: Oekoboiler's Heat Pump Boiler Sets New Standards in Eco-Friendly Heating

June 18, 2025

Hildisrieden, LU - June 18, 2025 -
Oekoboiler Swiss AG has just rolled out its latest energy-efficient hot water systems, showcasing its lead in sustainable technology. From its hub in Switzerland, the company designs, creates, and produces advanced heat pump boilers that mix heat pump and solar technology. These systems meet the ever-growing need for eco-friendly solutions. This announcement shows Oekoboiler Swiss AG's dedication to cutting down CO-2 emissions and delivering advanced products for today's homes.

A key part of their hot water solutions is the Double Energy System. This tech is all about efficiency, drastically cutting down on energy use. It heats water using both electricity and air, needing just 25% electricity while pulling 75% of its energy from the air. This setup not only slashes energy bills but also aligns with global sustainability goals, reducing energy use by 80% compared to traditional gas or oil heaters.

Oekoboiler Swiss AG's heat pump boilers are a testament to Swiss quality and engineering. They take heat from the air and use it for water heating, offering a smart, cost-effective solution with little environmental impact. Features like direct ventilation, PV function, and WiFi capability make these products perfect for today's consumers who want flexible, modern solutions.

Beyond the products themselves, the company is keen on staying ahead of the curve with sustainability. Anticipating future energy-efficiency standards like those in the EnEV 2025 (Energy Saving Ordinance), Oekoboiler Swiss AG ensures its products will meet and even exceed these guidelines, underscoring its role as a forward-thinking leader in green innovation.

Oekoboiler Swiss AG also understands the value of combining its products with photovoltaic systems. This allows homeowners to make the most of surplus solar energy, making their homes more efficient and sustainable. The product range is versatile, with tank capacities from 150 to 450 liters, backed by strong warranty conditions.

Customer satisfaction doesn't end at product delivery. Oekoboiler Swiss AG's installation services are all about maximizing energy use from the air, efficiently heating water while providing bonuses like basement air drying, which helps prevent mold. This feature can replace the need for additional dehumidifiers, adding both environmental and economic benefits.

Adhering to strict Swiss manufacturing standards, Oekoboiler Swiss AG offers products that are both durable and sustainable. By incorporating modern technology, they ensure that their water heating solutions meet today's household needs without hurting the environment.

This announcement from Oekoboiler Swiss AG emphasizes their focus on innovation, quality, and sustainability. Their advanced heat pump boilers highlight Swiss engineering, environmental mindfulness, and modern convenience. Homeowners and businesses aiming to utilize renewable energy and lower their carbon footprints can count on the solutions from Oekoboiler Swiss AG for a dependable path toward a greener future.
