Integrated Aesthetics Plastic Surgery Center and Medspa Now Offers Acorn Stem Cell Preservation

June 18, 2025

June 18, 2025 -
Spring, TX?Integrated Aesthetics, a Plastic Surgery Center and Medspa with locations in Spring and The Woodlands, Texas, is excited to announce the addition of Acorn Stem Cell Preservation to its menu of advanced anti-aging and regenerative services. Integrated Aesthetics is one of the first practices in the Spring and Woodlands areas to give patients a non-invasive way to bank their own youthful stem cells, paving the way for safer, more personalized therapies that can be used years or even decades into the future.

Unlike traditional stem-cell harvesting methods that rely on surgery or anesthesia, Acorn?s process takes just 15?20 minutes in the clinic and requires only 50 hair follicles plucked from the back and sides of the scalp. The follicles are sent to Acorn Biolabs, where living stem cells are isolated, tested for viability, and cryogenically frozen at ?190 °C. Once preserved, these cells are effectively removed from the aging process, ensuring that patients always have a reserve of their own younger, more potent cells available for future medical or aesthetic applications.

?Regenerative medicine is moving rapidly from concept to clinic, and we want our patients to be ready,? said

board-certified plastic surgeon Dr. Young Cho. ?By storing stem cells now, while they are at their healthiest, we can eventually reintroduce them to stimulate tissue repair, enhance collagen production, or even support organ-level regenerative therapies that have yet to be realized. Acorn lets us future-proof today?s treatments without the downtime or risks traditionally associated with cell banking.?

Integrated Aesthetics is translating Acorn?s future-proofing promise into an immediate anti-aging solution by converting each patient?s banked cells into a topical ?secretome,? a nutrient-rich serum created from each patient?s own follicle-derived growth factors, exosomes, and essential molecules to enhance tissue repair and regeneration for better skin and hair health. The secretome is applied onto freshly treated skin after laser resurfacing or microneedling to encourage accelerated healing, improved tone, and healthier hair growth. Patients may also take home a small supply for continued use over the two weeks following a procedure.

Board-certified dermatologist Dr. Melissa Chiang emphasized the dermatologic advantages of autologous cell-based care: ?Our dermatology and skincare services are personalized to help guide the skin to heal and renew itself. PRF and exosome boosters already give our patients a healthy glow, but the secretome delivers growth-factor levels up to 34 times higher than PRP. We?re now seeing calmer, more resilient skin with far less post-procedure redness?and results our patients can both see and feel sooner.?

Ideal candidates for Acorn Stem Cell Preservation include adults aged 18?65 who wish to address visible signs of aging or hair loss, plan for future corrective procedures, or simply want peace of mind as regenerative therapies advance. The process requires no incisions, no anesthesia, and minimal preparation beyond arriving with clean hair at least half a centimeter long. Because the formulation is 100 percent patient-specific, patients can avoid any risk of immune reaction, disease transmission, or donor variability. It?s a leap forward for those seeking natural, science-backed skin and hair rejuvenation.

With the launch of Acorn Stem Cell Preservation, Integrated Aesthetics continues a long-standing commitment to holistic, evidence-based care. The practice combines plastic surgery, dermatology, and leading-edge wellness services to deliver natural-looking, long-lasting results, empowering patients to look and feel their best?inside and out.

?Our mission has always been to guide patients through every stage of their aesthetic journey,? added Dr. Cho. ?Introducing stem-cell banking ensures that we can serve them not only today but well into the future, as new therapies emerge that leverage the power of their own biology.?

Patients interested in Acorn Stem Cell Preservation or secretome treatments are invited to schedule a consultation by calling (281) 404-5454 or visiting the website https://www.integratedaesthetics.com/. The

physician-owned plastic surgery centers and medical spas have two locations: the Spring office is located at 5061 Farm to Market 2920, Spring, TX 77388, and the Woodlands location is at 26118 I-45, Spring, TX 77386.
