

Eco-Friendly Hot Water Solutions: OekoBoiler Swiss AG Revolutionizes with Smart and Sustainable Technology

July 23, 2025

Hildisrieden, LU - July 23, 2025 -

OekoBoiler Swiss AG is committed to advancing sustainable and efficient solutions for hot water needs. Based in Switzerland, the company excels in producing heat pump boilers that utilize both solar energy and smart technology, focusing heavily on reducing CO2 emissions. Their products are designed to meet the needs of modern households while being environmentally friendly.

Central to their products is the Double Energy System, which uses both electricity and air to heat water up to 80% more efficiently than conventional methods. This system requires only 25% of its energy from electricity, while 75% is sourced from air, representing a significant move towards eco-friendliness. This approach not only lowers energy consumption but also reduces the reliance on fossil fuels, supporting environmental preservation.

OekoBoiler's range includes heat pump boilers that draw warmth from the surrounding air, making them both cost-effective and sustainable for hot water requirements. The range offers various models with features like

direct ventilation, photovoltaic (PV) capabilities, and WiFi, ensuring easy integration into smart homes. This variety means homeowners can select the best system for their needs and home design.

On top of this, Oekoboiler provides expert installation services to ensure top performance of their systems. During installation, these services take advantage of air energy, which not only boosts boiler efficiency but also lowers moisture levels in basements. This helps to prevent mold growth, eliminating the need for dehumidifiers.

As the EnEV 2025 Energy Saving Ordinance approaches, Oekoboiler is dedicated to ensuring their products meet the updated energy efficiency standards. Their proactive strategy guarantees customers receive the latest, most effective technology when these standards come into effect.

Oekoboiler's offerings include a variety of tank volumes from 150 to 450 liters, catering to different household requirements?from small homes to large family residences. Customers also benefit from generous warranty terms and eligibility for energy efficiency funding, which provides both economic and environmental incentives.

Embodying Swiss quality, these systems work seamlessly with photovoltaic systems, allowing homeowners to harness surplus solar power for water heating. This not only optimizes renewable energy use but also furthers efforts toward environmental sustainability.

Beyond product quality and innovation, Oekoboiler Swiss AG is committed to engaging with their customers. They offer thorough support to ensure users can fully utilize their systems' capabilities. This dedication to customer satisfaction reflects the company's broader mission to provide environmentally friendly solutions without sacrificing performance or user experience.

Including geographic accessibility is key to their market presence. To learn more, interested parties can explore this link: <https://maps.app.goo.gl/zBNNxGdCCBV7ZZ3C8>. Oekoboiler is transforming the landscape of sustainable hot water solutions with intelligent and ecological strategies, offering consumers technology that is both efficient and responsible. Their focus on lowering carbon emissions and fostering sustainable practices positions them as leaders in innovative home solutions. With a continuous commitment to quality, sustainability, and forward-thinking design, Oekoboiler Swiss AG is paving the way for a smarter, cleaner future in energy-efficient water heating.
