February 05, 2016 - PRESSADVANTAGE -

Sanford, FL - Monika's Marketplace has released a unique BPA Free Baby Teether by EcoGreenBee that has an anti-drop clasp that secures the teether to the baby's clothes, hence eliminating the teether from falling and collecting germs.

One of the biggest challenges that parents face with their teething babies is making sure that their baby is comfortable during this painful time. To comfort their babies many parents turn to tethers. These tethers are made for the baby to chew on for some relief from the teething pain. But the problem is that many babies have the teether in their mouths, drop the teether, then put it back in their mouth. When the wet teether is dropped, it collects germs.

To solve this problem, EcoGreenBee created a teether that can be secured to the baby's clothes so when the teether falls from the baby's mouth, it does not drop to the floor due to the secure clasp on the baby's clothes.

This also helps avoid frustration from parents trying to locate a dropped teether, wash it, then give it back to the baby.

"This is a genius idea; I don't know why other teethers don't use this same concept of the clasp. It makes a lot of sense. My baby loves this teether and I love that it doesn't drop on the ground! Then it is also a BPA Free baby teether which makes it even better," said Amy a happy customer.

"We created this teether because this was actually an issue with my daughter and her teether toys. So, I know if it was something I was dealing with, I know other parents were dealing with it as well," said Rose, a company representative for EcoGreenBee.

EcoGreenBee specializes in environmentally friendly products with their flagship product their anti-drop BPA free baby teether that can be found on Amazon.com
