?Dry eye is not only frustrating, it can dramatically impact a person?s daily quality of life,? said Dr. Dawson Li, O.D., co-founder and practicing optometrist at Li & Details and Detail

Dry eye disease affects millions of Americans and often stems from inflammation, meibomian gland dysfunction, or environmental triggers. While artificial tears and topical medications can relieve symptoms, they often fall short in addressing the underlying causes. LLLT offers an alternative for patients who need something more effective, using specific wavelengths of light to reduce inflammation, stimulate cellular repair,

and improve the function of blocked meibomian glands.

By addressing the oil layer of the tear film, LLLT can help prevent evaporation and improve ocular comfort

over time. The treatment is particularly beneficial for patients whose symptoms stem from gland obstruction

or chronic inflammation. When paired with IPL, which targets inflammation in the surrounding skin and treats

vascular irregularities near the eyelids, patients benefit from a comprehensive, surface-level and deep-tissue

approach to care.

Bakersfield clinics, the Brimhall office features diagnostic and therapeutic equipment that delivers both

precision and consistency in dry eye care. The location has earned a reputation for managing stubborn and

long-term ocular surface conditions, and this new treatment aims to build on that foundation.

?We often meet patients who have lived with dry eye for years, sometimes decades,? said Dr. Li. ?They've

tried drops, gels, and even prescription ointments, but those only go so far. With the technology we now have

at Brimhall, we can finally address the core dysfunction, not just cover up symptoms.?

A variety of lifestyle and medical factors, including screen exposure, contact lens use, hormonal changes,

autoimmune disease, and environmental stressors, can cause dry eye disease. Despite diverse causes, most

cases share a common outcome: an unstable tear film and chronic discomfort. The LLLT and IPL services

that Li & Droader effort to help patients find longer-term relief

through medical-grade, root-cause treatments.

Li & amp; Liao?s new technology also reflects a growing trend in optometry: combining aesthetic and

therapeutic technologies to treat traditionally stubborn eye conditions. Dermatologists originally developed

both LLLT and IPL for skin rejuvenation and dermatological procedures. Ophthalmologists have adopted

these technologies due to their ability to target inflammation and encourage tissue regeneration without

surgery.

Li & amp; Liao?s Brimhall Road office currently welcomes new evaluations for patients who may benefit from

dry eye treatment. Appointments are available six days a week, including Saturdays, and both new and

existing patients can schedule a consultation by calling (661) 449-9106 or visiting bakersfieldeyedoc.com.

About Li & Detometry

Li and Liao Optometry is a reputable eye care practice founded in 2001 by Drs. Dawson Li and Yuh-Jen Liao.

With a commitment to being true partners in eye care, the practice offers comprehensive eye care services

using state-of-the-art technology. With a large optical selection in-office, Li & Dytometry also offers

myopia control options for children, and advanced dry eye treatment, as well as more novel technology such as Neurolens®. Their skilled optometrists and compassionate team members have built strong relationships and delivered exceptional care throughout California for years, serving patients in the northwest, central, and southwest Bakersfield communities.
