

# Mats for Gym Flooring Now Featured in Expanding Home Fitness Range by Strongway Gym Supplies UK

*July 11, 2025*

Coventry, UK - July 11, 2025 - PRESSADVANTAGE -

Strongway Gym Supplies continues to serve home fitness users with a broad selection of products built for everyday use. As more people commit to exercising at home, setting up a space that's both safe and comfortable has become just as important as the equipment itself. While strength machines and dumbbells usually get the spotlight, there's another part of the setup that matters just as much: the flooring. From reducing joint stress to protecting surfaces, proper gym flooring plays a key part in shaping the feel and safety of a training area.

One of the choices available is the Strongway Gym Flooring Foam Mats, made specifically for home use. These tiles are made from EVA foam and offer a surface that feels soft without being unstable. They're useful for floor-based exercises, stretching, or light equipment work. The mats are easy to assemble thanks to their interlocking design, and the non-slip base ensures they stay in place once set up. The cushioning helps soften impact without compromising balance, making them suitable for a variety of movements. Users can also expand or reduce the area covered, which helps when adapting to limited floor space or shared rooms. More information about these mats can be found here: <https://strongway.co.uk/products/gym-flooring-foam-mats-interlocking-exercise-mats-eva-floor-tiles-non-slip-rubber>.

These mats tend to work well in home setups where the space serves more than one purpose ? garages, spare rooms, or living areas that double as workout zones. They're easy to shift around or store when not in use, and many people place them beneath benches or small cardio machines to help absorb vibration and shield the floor. They've become a common choice for users who lean towards steady, low-impact training, such as activities like bodyweight circuits, stretching routines, or post-injury rehab work. While not built for the kind of impact that comes with dropping weights, they meet the needs of users whose sessions are more focused on control and consistency.

For setups that involve heavier kit, Strongway also supplies rubber mats that offer a sturdier and more durable base. Each mat is a metre square and 15mm thick, giving it the weight and density needed to support things like squat racks or weight benches without damage to the surface underneath. They're also suitable for lifters who regularly lower plates or kettlebells to the ground. The surface has a slight texture, which helps keep equipment in place even during workouts that involve sudden shifts or more dynamic movements. These are often chosen by users turning garages or outbuildings into full-time gyms. Full specifications and bundle options can be found here: <https://strongway.co.uk/products/gym-flooring-rubber-mats-1m-x-1m-x-15mm>.

Many commercial gyms use rubber mats like these because of their reliability. They last, they absorb shock, and they help manage noise. That same reliability translates well to home setups, especially when working with bars, kettlebells, or any equipment that's tough on surfaces. The extra weight of the mats also means they stay in place without needing adhesive or extra effort. In a setup where people want stability but don't want to commit to permanent changes in the room, this kind of matting fits well.

A recent article took a closer look at how important flooring can be for home workouts, particularly when a space is shared or used for more than just training. It compared materials like foam and rubber, pointing out which users are likely to benefit from each and under what conditions. Readers who'd like to explore this in more depth can find the full article on mats for gym flooring.

Strongway's selection aims to reflect how people actually train at home. Some want a bit of cushioning for everyday movement and stretching. Others want something firm and solid that'll handle the demands of more structured lifting. By offering both ends of that spectrum, the company allows customers to choose what works best for them, not just in terms of workouts, but for the spaces they're training in. As more households make room for regular fitness, small but smart choices like these flooring options can help bring those plans together more effectively and comfortably. Users interested in making their home gym setups safer can find more information and place orders by visiting the product links provided above.
