ClearSight Highlights Breakthrough in Vision Correction with Bausch + Lomb enVista Envy Lens for Cataract Surgery and Custom Lens Replacement

July 11, 2025

PLANO, TX - July 11, 2025 -
Patients exploring options for cataract surgery or Custom Lens Replacement now have access to one of the most advanced intraocular lenses available?the Bausch + Lomb enVista Envy lens?offered at ClearSight. This next-generation trifocal lens represents a significant step forward in helping individuals achieve crisp, reliable vision across near, intermediate, and distance ranges without depending on glasses or contact lenses.

Cataract surgery and Custom Lens Replacement (also known as refractive lens exchange) are among the most commonly performed eye procedures in the United States. While traditional intraocular lenses (IOLs) have served patients well for decades, the enVista Envy lens brings a new level of innovation with its unique combination of optical technologies. Patients at ClearSight who receive the enVista Envy lens benefit from its trifocal design, which allows them to focus clearly at a variety of distances?reading a book, working on a computer, or driving?without the abrupt ?vision jumps? sometimes experienced with older multifocal lenses.

Unlike traditional multifocal lenses that offer only two focal points, the enVista Envy features ActivSync Optic technology, which intelligently distributes light across a full range of visual needs. This innovation is designed to reduce the common drawbacks patients sometimes report with other IOLs, such as halos, glare, or starbursts, particularly in low-light settings. Clinical data shows that most patients experience little to no bothersome visual disturbances after surgery. Many also report that they are able to enjoy routine daily activities without needing corrective eyewear?a significant quality-of-life improvement that aligns with the goals of most patients undergoing lens replacement.

Made from a glistening-free, hydrophobic acrylic material, the enVista Envy lens is engineered for clarity, durability, and scratch resistance. Its optical design is supported by ClearPath and TruSight technologies, which further enhance contrast and image sharpness, especially in challenging lighting conditions. These combined features help deliver a more natural and dependable visual experience that closely aligns with what

patients had when they were younger and had healthy, natural lenses. In ClearSight?s clinical experience, the lens has become a preferred option for patients seeking visual freedom, particularly those who are active, work on screens, or want to reduce or eliminate the need for reading glasses or bifocals.

The enVista Envy lens is FDA-approved for use in the United States and has also been approved by Health Canada, following rigorous clinical trials that demonstrated strong outcomes in both safety and effectiveness. Studies have shown that many patients achieve 20/20 vision at distance and 20/25 or better at intermediate ranges without glasses. This level of precision is a key differentiator for patients who value not only sharp vision but also visual comfort throughout their day.

ClearSight is one of the first practices in the region to offer the enVista Envy lens as part of its customized vision correction procedures. The practice combines medical expertise in both ophthalmology and optometry to help each patient determine the most appropriate lens option based on their lifestyle and vision goals. Patients considering Custom Lens Replacement or cataract surgery undergo a comprehensive consultation process at ClearSight, which includes a detailed evaluation of their eye health, vision needs, and candidacy for advanced technologies like the enVista Envy lens.

For individuals with corneal astigmatism, the enVista Envy lens is also available in a toric version. This model allows for precise astigmatism correction in smaller, 0.5 diopter increments, giving ClearSight surgeons the ability to tailor outcomes with a high degree of accuracy. This is particularly valuable for patients with even mild astigmatism, who may otherwise experience suboptimal results with standard lenses. ClearSight?s team uses advanced diagnostic equipment to determine the correct lens power and orientation, helping ensure the best possible results following surgery.

Patients who have previously undergone LASIK or other refractive procedures are also potential candidates for the enVista Envy lens, provided they meet other standard eligibility criteria. ClearSight evaluates these individuals on a case-by-case basis, using state-of-the-art tools to ensure that the selected lens complements their surgical history and current visual profile. The ability to offer a seamless lens solution to both post-LASIK patients and first-time surgical candidates makes the enVista Envy a versatile option in ClearSight?s vision correction toolbox.

As a growing number of patients express interest in procedures that offer more than basic vision correction, ClearSight continues to invest in technologies that deliver long-term value. With the enVista Envy lens, patients can expect not only improved vision but also a simplified experience?one where glasses are no longer a constant companion. For many, this means returning to everyday life with renewed independence and comfort, whether it?s reading a menu, watching a movie, or enjoying a sunset drive.

Dr. Luke Rebenitsch, Medical Director at ClearSight, emphasizes the importance of patient education and

personalized care when considering premium lens options. ?Every eye is different, and so is every patient?s lifestyle,? says Dr. Rebenitsch. ?The enVista Envy lens gives us a reliable, high-performing tool to offer our patients a more complete vision solution. It represents where ophthalmology is headed?toward smarter optics, more natural vision, and higher patient satisfaction.?

At ClearSight, patients are guided through every step of the process, from initial evaluation to post-operative care. The practice has built a reputation for excellence by focusing on comprehensive education, individualized treatment plans, and a deep commitment to outcomes. This patient-centered model ensures that those considering the enVista Envy lens or any vision correction procedure receive the time, attention, and expertise needed to make an informed decision.

The enVista Envy lens is not the only option available for cataract and lens replacement procedures, but it is fast becoming one of the most requested due to its versatility and proven performance. As patients increasingly seek alternatives to glasses and contact lenses, ClearSight remains at the forefront of offering the best that modern vision science has to offer. From the precision of its diagnostic technology to the surgical expertise of its team, the practice is equipped to meet the demands of today?s vision correction patients.

For reporters seeking expert commentary on trends in lens technology, cataract surgery innovations, or Custom Lens Replacement, ClearSight offers access to knowledgeable clinicians who are directly involved in the development and delivery of these advanced procedures. Media inquiries are welcomed, and interviews can be arranged with Dr. Rebenitsch or members of the surgical team to discuss the enVista Envy lens, its benefits, and the evolving expectations of today?s patients.

To learn more about the Bausch + Lomb enVista Envy lens or to schedule a consultation with the ClearSight team, visit www.clearsight.com or contact the office directly. Patients can expect a full evaluation, an in-depth discussion of lens options, and a clear path forward toward life with better vision and fewer limitations.
