

Parking Area Management Inc. Elevates Pavement Maintenance Standards in Omaha and Surrounding Communities

July 10, 2025

OMAHA, NE - July 10, 2025 -

OMAHA, NE ? July 11, 2025 ? Parking Area Management Inc., a distinguished veteran-owned asphalt pavement contractor, today announced a significant enhancement of its core services, reinforcing its 40-year commitment to quality and durability for commercial and private properties throughout Omaha and the surrounding regions. This initiative introduces advanced techniques and materials in asphalt paving, crack sealing, and concrete care, setting a new benchmark for property maintenance and safety in the area.

For over four decades, Parking Area Management Inc. has been a cornerstone of the Omaha business community, providing essential exterior maintenance services. The company's decision to upgrade its service protocols comes at a critical time, as fluctuating weather patterns in the Midwest continue to pose significant challenges to the longevity of paved and concrete surfaces. These newly enhanced services are designed to offer superior protection and a longer lifespan for parking lots, driveways, and walkways, directly addressing the concerns of property managers and owners in Omaha, Council Bluffs, Lincoln, Fremont, Columbus, and Nebraska City.

The company's enhanced asphalt paving services now incorporate a more robust polymer-modified asphalt binder, which offers increased resistance to rutting in the high summer heat and better flexibility during the freezing winter months. This advanced material, combined with state-of-the-art paving and compaction equipment, ensures a smoother, more durable surface that can better withstand the daily stresses of heavy traffic and harsh environmental conditions. This focus on material science and application precision is a direct response to the growing need for more resilient infrastructure solutions in the region.

In addition to paving, Parking Area Management Inc. has refined its approach to asphalt preservation with an improved crack sealing methodology. The company now utilizes a hot-applied, rubberized sealant that offers superior adhesion and flexibility compared to traditional materials. This advanced sealant penetrates deep into cracks, creating a watertight bond that prevents moisture from seeping into the sub-base, a primary cause of pavement failure. By proactively addressing minor cracks with this superior technology, the company helps property owners avoid more extensive and costly repairs in the future, thereby extending the life of their investment.

According to the owner of Parking Area Management Inc., the company's mission has always been to provide its clients with the highest level of service and the most durable results. The owner stated, "These service enhancements are a testament to that commitment. The company has invested heavily in research and development to identify the best materials and techniques available in the industry. For the company, this is about more than just filling cracks or laying asphalt; it's about providing long-term solutions that enhance the safety, functionality, and aesthetic appeal of a property. As a veteran-owned business, the team brings a level of discipline and attention to detail to every project that its clients have come to rely on. The organization understands that a well-maintained parking area is the first impression a business makes, and it is dedicated to ensuring that impression is a positive and lasting one."

The company's comprehensive concrete care services have also been upgraded. Recognizing that concrete surfaces such as sidewalks, curbs, and loading docks are integral to a property's safety and appearance, Parking Area Management Inc. now offers advanced concrete repair and sealing solutions. This includes the use of high-strength, rapid-setting repair mortars for spalls and cracks, as well as penetrating sealers that protect against moisture intrusion, salt damage, and staining. These enhancements are particularly crucial for enduring the region's freeze-thaw cycles, which can be incredibly damaging to concrete.

Furthermore, the line striping services offered by the company now utilize a more durable, retroreflective paint that improves visibility for drivers and pedestrians, especially during nighttime and adverse weather conditions. The precise application of these markings is crucial for ensuring compliance with ADA regulations and maximizing the efficiency and safety of any parking area.

Even the company's seasonal snow removal services have been improved through investments in more efficient equipment and advanced logistical planning. This ensures a rapid and thorough response following winter storm events, minimizing business disruptions and reducing the risk of slip-and-fall incidents.

The emphasis on enhanced services underscores Parking Area Management Inc.'s proactive approach to property maintenance. By focusing on preventative measures and utilizing the latest industry innovations, the company provides its clients with a strategic advantage in preserving the value and safety of their properties. This forward-thinking methodology, combined with a 40-year track record of reliability, positions Parking Area Management Inc. as a leader in the pavement maintenance industry. The company's status as a veteran-owned business further solidifies its reputation for integrity, precision, and unwavering dedication to excellence. Property managers and owners in Omaha and the surrounding communities can continue to trust Parking Area Management Inc. for all their asphalt and concrete needs, now with the added assurance of even more advanced and effective solutions.

Parking Area Management Inc. operates Monday through Friday from 9 AM to 5 PM. The team encourages property owners and managers to schedule a consultation to learn more about how these enhanced services can benefit their properties.
