

# Fuel And Fleet Solutions Launches Telematics Integration

*July 11, 2025*

DORAL, FL - July 11, 2025 -
Fuel And Fleet Solutions, a leading provider of commercial fuel management services, has announced a significant advancement in fleet operations through its new integration with major telematics platforms. This strategic development delivers seamless reporting capabilities designed to help fleet managers reduce fuel costs, enhance compliance, and gain real-time operational visibility.

The integration enables Fuel And Fleet Solutions to synchronize with a variety of telematics systems, merging GPS tracking, vehicle diagnostics, and driver behavior data with live fuel transaction reporting. The result is a centralized platform that streamlines data access, eliminates manual entry, and empowers decision-makers with actionable insights across fleets of all sizes.

?With fuel representing one of the largest variable costs in transportation, gaining access to accurate, real-time data is a critical advantage,? said Shannon Mangroe, Director of Fleet Operations at Fuel And Fleet Solutions. ?This integration is about creating clarity and control. It allows fleet managers to proactively

manage operations, respond to inefficiencies faster, and drive measurable performance improvements.?

Historically, disconnected data sources have made it difficult for fleet operators to correlate fuel spend with driver behavior or vehicle utilization. The new solution bridges that gap, enabling operators to track fueling habits alongside route compliance, idling, and mechanical alerts ? all on a single, intuitive dashboard.

This level of insight helps identify fuel waste from unauthorized usage or inefficient routes and makes it easier to benchmark performance across drivers or vehicle types. In addition, built-in predictive analytics allow operators to forecast future fuel needs, detect trends, and plan budgets with greater accuracy.

The integration is compatible with leading telematics providers, requiring no major infrastructure overhaul. With an open API framework, existing systems can be connected quickly and securely, ensuring fast deployment with minimal disruption. Data security is a top priority, with all communication encrypted and managed under GDPR and ISO 27001 compliance protocols.

The reporting suite includes customizable dashboards and exportable reports aligned with key fleet KPIs. Whether focused on fuel theft prevention, emissions monitoring, or driver safety, operators can configure the platform to highlight their most important metrics. These reports can be shared with stakeholders, used for internal audits, or submitted for compliance reporting.

This development arrives as fleet operators face increasing operational pressures?from volatile fuel prices and environmental regulations to driver accountability and digital transformation. Fuel And Fleet Solutions is responding with innovation that not only enhances current capabilities but also lays the groundwork for future-forward fleet management, including EV planning and sustainability initiatives.

To enhance the rollout and provide deeper strategic support, Fuel And Fleet Solutions has partnered with Fuel Consults, a consultancy known for helping transportation companies reduce costs and streamline operations. This collaboration provides clients with access to advanced data interpretation and strategic fleet consulting.

?Fuel Consults is proud to support this initiative,? said a spokesperson from the firm. ?This integration gives operators the tools they need to manage fleets with greater precision. We?re here to help them leverage that data effectively ? whether the goal is to reduce emissions, increase uptime, or negotiate better rates with suppliers.?

As part of the launch, the two companies are offering an educational webinar series. These sessions will guide fleet professionals through best practices in using integrated fuel and telematics data to improve performance and compliance. Topics include fraud detection, policy enforcement, emissions reduction

strategies, and fleet forecasting using AI tools.

Early users of the system are already reporting substantial improvements. One regional logistics company cut idle time by 18% in the first month of implementation, attributing the success to better visibility into engine-on time at non-delivery locations. Others have noted reduced administrative overhead and fewer billing discrepancies due to streamlined reporting.

In support of customers, Fuel And Fleet Solutions provides full onboarding and technical integration services. Clients receive personalized support from system configuration through to ongoing performance analysis. The company?s customer success team ensures users understand how to make the most of the system?s tools, with training options and dedicated support available throughout the lifecycle.

This launch underscores Fuel And Fleet Solutions? ongoing mission to modernize fuel and fleet management through data-driven tools and responsive customer service. As the industry evolves, the company remains committed to delivering the resources and technologies that help fleets stay competitive, compliant, and cost-efficient.

About Fuel And Fleet Solutions
Fuel And Fleet Solutions is a trusted provider of fuel cards and fleet management tools for businesses across the UK. Specializing in data-driven services that reduce costs and improve efficiency, the company supports fleets of all sizes with tailored solutions that simplify fuel purchasing and enhance operational insight.

About Fuel Consults
Fuel Consults delivers expert fleet optimization services, helping organizations cut fuel waste, improve compliance, and achieve measurable performance improvements. Their consulting services are trusted by logistics, transportation, and commercial vehicle operators nationwide.
