RothGreaves Exhibits Products At MedTechWorld

February 11, 2016

February 11, 2016 - PRESSADVANTAGE -

RothGreaves & Associates, a business in Long Lake, MN, is proud to announce that they have had a presence at the trade show, MedTechWorld. The event was very successful and the company looks forward to working with new clients. At the event, they showcased their PTFE coating DR-95Z, which is a proprietary formula that coats wires that are used in catheters and other medical equipment.

A spokesperson for RothGreaves & Associates says: "We are a full-service, multidisciplinary, engineering firm that provides technical expertise to medical device manufacturers, pharmaceutical producers, and high-technology firms. We focus on providing the world's best coil winders and the most reliable PTFE release finishes, and creating first-class custom applications. Our products can add value to a company with quality engineered systems and services available. We're very happy to say that the MedTechWorld show was a great success and that we have been able to introduce our products to a wider variety of people."

RothGreaves occupied booth 748 at the event, which seems to have been a prime position, as they attracted a very large audience. They were able to not just showcase their PTFE coating, but also discuss its benefits and what it can do in terms of catheters and medical equipment. Those who attended were very enthusiastic about the information they received. The company has also asked people to like their Facebook page, where

they can discuss the things they have learned and experienced during the show.

The PTFE finishes they have designed can specifically be used in applications that require a non-stick, durable and high temperature finish. The finish is said to be so smooth that the difference with other finishes is noticeable. It has a glass-like finish that is perfect for molding and bonding of thermoplastics, adhesive bonding, injection molding and any other type of manufacturing tooling where a high temperature, non stick, easy release finish is required. The PTFE has also been designed to be incredibly durable, which is why it is known to be best in class.

Since the event, RothGreaves has already welcomed many more clients to their books and they are happy to be making a difference in the world of medical technology.
