Century Pools Introduces Complimentary 3D Inground Pool Design Service

September 11, 2025

Orangevale, CA - September 11, 2025 -
Century Pools, a family-owned pool construction company serving Northern California since 1964, has launched a complimentary 3D design service that allows homeowners to visualize their inground pool projects before construction begins.

The 3D design service enables clients to explore various pool configurations, materials, and features in a detailed virtual environment. Homeowners can review different design options including Gunite pools, Freeform pools, Geometric pools, and Pool and Spa combinations, all rendered in three dimensions to provide accurate representations of how the finished project will appear in their specific outdoor space.

"This technology transforms the traditional pool planning process by eliminating uncertainty and allowing families to make informed decisions about their investment," said Patrick O'Neal, senior representative at Century Pools. "Clients can experiment with different shapes, depths, and features while seeing exactly how their new Inground Pool will complement their existing landscape and architecture."

The complimentary service includes professional consultation with Century Pools design specialists who

guide homeowners through various options while considering factors such as lot size, terrain, local building codes, and budget parameters. The 3D visualization technology displays realistic renderings that include surrounding landscaping, decking materials, water features, and lighting options.

As an experienced inground pool builder, Century Pools has constructed thousands of custom pools throughout Northern California over nearly six decades. The company maintains an A+ rating with the Better Business Bureau and holds California contractor license number 224222. Their portfolio includes residential projects ranging from compact geometric designs for urban properties to expansive freeform pools with integrated spas for larger estates.

The 3D design service addresses common concerns homeowners face when planning pool installations. Property owners can assess how different pool placements affect yard usage, evaluate sight lines from various indoor and outdoor vantage points, and understand the spatial relationships between the pool and existing structures. The technology also helps identify potential challenges early in the planning phase, reducing the likelihood of costly changes during construction.

Century Pools incorporates sustainable options into their designs, including solar heating systems, energy-efficient pumps, and automated cleaning solutions. The 3D visualization platform displays these features and demonstrates their integration into the overall pool system, helping homeowners understand both immediate and long-term benefits of various equipment choices.

The company specializes in multiple pool construction methods and styles, with particular expertise in Gunite applications that allow for completely customized shapes and features. Their construction teams handle all aspects of installation, from initial excavation through final finishing touches.

Based in Orangevale, California, Century Pools serves the greater Sacramento area and surrounding Northern California communities. Learn more about their services, including the 3D design service, at their website.
