

Christmas Air Expands Plumbing Services to Include Water Filtration Installation and Repair

July 29, 2025

FLOWER MOUND, TX - July 29, 2025 -
Christmas Air Conditioning and Plumbing has expanded its residential and commercial plumbing offerings with a new focus on water filtration installation, repair, and replacement services for homeowners in Flower Mound, Argyle and the surrounding areas of Denton County. The move reflects the growing concern among North Texas homeowners regarding water quality and the increasing demand for in-home solutions that address issues such as taste, odor, and potential contaminants found in municipal water supplies.

As more homeowners become aware of the long-term effects of hard water and unfiltered tap water on both personal health and household infrastructure, the demand for specialized filtration services has increased. Now, local residents in communities such as Flower Mound, Argyle, and Lewisville are seeking professional guidance on selecting and maintaining water filtration systems that provide cleaner, safer water. According to Nathan Lenahan, owner of Christmas Air Conditioning and Plumbing, the expansion into water filtration was a natural step in response to client feedback and ongoing shifts in residential water quality concerns, as well as part of their commitment to provide local plumbing services in addition to their HVAC services.

"With more and more families asking questions about the safety of their tap water and the right way to protect their plumbing systems, we recognized the need to offer dedicated water filtration services that are safe, effective, and tailored to individual household needs," said Lenahan. "Whether it?s improving the taste of drinking water or extending the lifespan of fixtures and appliances, the right filtration system makes a meaningful difference."

Professionally installed water filtration systems can reduce levels of chlorine, sediment, heavy metals, and other impurities that may be present in municipal water sources. In areas of North Texas and beyond, where mineral content and chemical treatments can vary, properly selected and installed filtration units help ensure consistent water quality across a home?s entire plumbing system. This not only improves the taste and odor of water but also helps minimize buildup in pipes and appliances, leading to fewer repairs and more efficient operation over time.

Homeowners now have access to these comprehensive water filtration systems through the Christmas Air team, including new installations, maintenance of existing filtration systems, and timely repairs to restore proper function. The company?s licensed plumbing professionals are trained to evaluate water quality issues, recommend appropriate system types?such as carbon filters, reverse osmosis units, or whole-house filtration solutions?and install each component with attention to detail and safety.

The addition of filtration-related services enhances Christmas Air?s reputation as a comprehensive plumbing provider with a longstanding presence in the Flower Mound and Argyle communities. The company is recognized for addressing a wide range of HVAC and plumbing concerns and delivering solutions tailored to local household needs. With this latest service expansion, homeowners seeking healthier, better-tasting water now have a trusted local option backed by experienced technicians and a customer-focused approach.

The Denton County area has seen a steady rise in interest surrounding water quality, with many residents taking a proactive stance on protecting their families and their homes from the long-term effects of unfiltered tap water. Reports of scaling in pipes, cloudy water from the tap, and recurring appliance issues have prompted a noticeable shift toward home filtration systems that are designed to manage both aesthetic concerns and more serious health-related risks.

Christmas Air Conditioning and Plumbing?s water filtration installation and repair services include access to professional consultation, where residents can schedule an on-site assessment to determine the condition of their water and plumbing systems. These evaluations enable homeowners to make informed decisions about system upgrades or replacements, ensuring that the chosen products meet both water quality goals and household usage demands. The company also offers prompt repair services to address malfunctioning units or replace outdated components, keeping water systems running reliably year-round.

Residents in Flower Mound and nearby communities interested in learning more about the benefits of water filtration or scheduling a consultation are encouraged to visit the new service page at https://christmasair.com/plumbing-services/water-filtration-installation-repair-replacement/. The page includes detailed information about installation options, system types, and how filtration can improve water quality throughout the home.

Christmas Air Conditioning and Plumbing in Flower Mound and Argyle continues to respond to evolving homeowner concerns by offering practical solutions supported by technical expertise. As more North Texas families prioritize home health and water quality, the company?s filtration service is positioned to meet those needs with professionalism and attention to detail. Interested homeowners are invited to schedule a service consultation through the website and take the next step toward cleaner, better water throughout their homes.
