

Boston Plastic Surgery Now Offers Motiva® Breast Implants, the Next Generation of Silicone Implants for Natural-Looking Results and Enhanced Safety

August 19, 2025

QUINCY, MA - August 19, 2025 -

BOSTON, MA—Boston Plastic Surgery announces the addition of Motiva® silicone breast implants for breast augmentation to its list of breast implant options. As leaders in aesthetic medicine with a focus on innovation and patient-centered care, the practice is among the first plastic surgery centers in the Greater Boston area to offer this advanced implant technology.

Motiva breast implants are FDA-approved and recognized for their next-generation design, offering patients new safety features while providing natural-looking aesthetic outcomes. Developed by Establishment Labs, these silicone implants incorporate several key advancements to address the most common concerns related to breast augmentation and implant replacement surgery.

“We’re excited to offer our patients another safe and reliable breast implant option to personalize their procedure—especially an option that combines safety, beauty, and peace of mind,” said Dr. Fouad Samaha, board-certified plastic surgeon and founder of Boston Plastic Surgery. “The advanced safety technology behind Motiva implants has been proven to lower primary breast augmentation concerns such as implant

rupture and capsular contracture.?

Motiva implants offer a number of features that set them apart. The SmoothSilk® surface is engineered to reduce inflammation and the risk of capsular contracture—a complication in which scar tissue forms tightly around the implant, potentially distorting its shape and requiring corrective surgery. Motiva implants have impressively low rates of capsular contracture at just 0.5%.

In addition, the BluSeal® barrier layer—a faint blue tint on the implant's surface—enables surgeons to verify the structural integrity of the implant before it is placed. This added layer of visual confirmation serves as a simple but powerful tool to enhance safety in the operating room. Motiva's rupture and infection rates are 0.6% and 0.9% respectively.

Boston Plastic Surgery offers patients two styles of Motiva implants: the SmoothSilk® Round, which maintains its fullness and upper-pole projection regardless of body position, and the SmoothSilk® Ergonomix®, which is engineered to mimic the way natural breast tissue moves. The Ergonomix implant subtly shifts from a round to teardrop shape based on the body's position, creating results that look natural when standing, lying down, or in motion.

These implants are filled with highly cohesive silicone gel, which adds to their durability and provides a soft, natural feel. All Motiva implants are covered by a standard manufacturer's warranty, with optional upgraded coverage for those seeking added confidence in their investment.

Motiva implants offer a timely solution for natural breast augmentation, with terms like "Ballerina breast augmentation" and "petite breast augmentation" becoming increasingly popular for patients who seek subtle enhancement over more dramatic size changes.

Dr. Samaha explained, "Motiva's silicone implants are an excellent option to enhance the natural shape of the breast and fill out the breast pocket to create elegant cleavage without creating an obviously augmented look and maintaining a natural look and feel."

Whether a patient is pursuing primary breast augmentation or seeking to replace older implants with breast implant revision surgery, Boston Plastic Surgery ensures a fully personalized experience. Consultations with Dr. Samaha and Dr. Phelan include an in-depth discussion of implant options, sizing, placement techniques, and how Motiva may benefit the patient's specific anatomy and desired outcome.

"Motiva implants can give us more flexibility in technique, which means more customization for each patient's body and goals," said Dr. Phelan. "For example, because Motiva implants so closely mimic natural breast tissue, we can place them over-the-muscle with less concerns about visible implant rippling or an

unnatural feel, even for patients with naturally thin breast tissue.?

To learn more about Motiva silicone breast implants or schedule a personal consultation with Dr. Samaha or Dr. Phelan at Boston Plastic Surgery, located at 2300 Crown Colony Dr., Suite 101 Quincy, MA 02169, call 617-786-7600 or visit bostonplasticsurgery.com.
