

Mindmachines.com Advances Meditation Technology with Third Generation ROSHIwave Device

September 12, 2025

Dallas, Texas - September 12, 2025 -

Mindmachines.com has released the third generation of its ROSHIwave IN-SIGHT Mind Machine, a brainwave entrainment device that guides users to deep meditative states through advanced photostimulation technology. The updated meditation device incorporates enhanced protocols and improved navigation features designed to help users achieve mental clarity and better performance.

The ROSHIwave IN-SIGHT represents the culmination of decades of research in brainwave entrainment technology. The pocket-sized device utilizes a process called Dynamic Neuro-Activation, which employs specially calibrated flickering light patterns delivered through RGB LED glasses to normalize brainwave frequencies. This technology enables users to reach meditative states typically associated with experienced Zen practitioners, often within 15-minute sessions.

"The third generation ROSHIwave builds upon our established protocols while introducing multiplexed versions that provide users with more comprehensive brainwave optimization options," said Fred Williams,

Director of Product Development at Mindmachines.com. "This device serves as what we call a digital compass for the brain, guiding users to achieve mental states that traditionally required years of meditation practice."

The updated device features USB rechargeability and operates with an intuitive click-wheel interface similar to portable media players, eliminating the need for smartphone apps or complex setup procedures. The system includes the ROSHIwave Console, color-changing RGB RoshiGlasses with six side-firing LEDs per eye, a Ganzfeld RoshiVisor for immersive light experiences, and a carrying case for portability.

Nearly 100 clinicians worldwide currently utilize ROSHIwave technology as a therapeutic tool for various applications including stress management, enhanced learning, and behavioral modification. The device employs Brainwave DisEntrainment through Photostimulation, a methodology that differs from traditional entrainment by freeing the mind from repetitive patterns rather than synchronizing to specific frequencies.

The third-generation model incorporates the pROSHI 2++ protocols, developed by the late Chuck Davis, a pioneer in brainwave entrainment research. These protocols expand the device's capabilities for addressing various mental states and performance goals. The technology has applications in education, biofeedback therapy, stress reduction, and personal wellness programs.

While not classified as a medical device, the ROSHIwave IN-SIGHT has garnered attention from wellness practitioners and performance coaches seeking non-invasive methods to help clients achieve optimal mental states. The device includes safety features and clear guidelines, with specific warnings against use by individuals with seizure disorders.

The release of this third-generation device comes as interest in technological meditation aids continues to grow among both wellness professionals and individuals seeking alternatives to traditional meditation practices. The ROSHIwave technology represents an intersection of neuroscience research and practical application in the field of consciousness exploration and mental performance optimization.

Mindmachines.com serves as a global distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, and meditation machines. The company, operated by Av3X LLC and based in Dallas, Texas, specializes in technologies designed to enhance mental performance, wellness, and personal achievement through advanced brainwave modulation techniques.
