

## **Safety First Training Ltd. Elevates Forklift Safety with Comprehensive Training Program Across Canada**

*August 25, 2025*

Mississauga, ON - August 25, 2025 - PRESSADVANTAGE -

Safety First Training Ltd. is offering a wide-ranging forklift operator training program across Canada. This initiative is designed to fit with all the country's safety standards, making sure that both new and seasoned operators learn the crucial skills needed for handling materials safely and keeping in line with workplace guidelines. Further details about their services can be found on their main website, [Safety First Training](https://www.safetyfirsttraining.com).

The Safety First Training program is unique because it combines both theoretical knowledge and hands-on practice. Trainees engage in detailed safety checks of equipment, learning how to spot issues before they turn into serious problems. This part of the training helps prevent accidents and ensures a safer work environment.

Another key part of the curriculum is learning how to handle loads safely. Operators are taught to manage different weights and sizes to prevent accidents like tip-overs. This involves calculating the center of gravity, understanding the stability triangle, and recognizing what affects load balance.

Participants also learn to assess workplace hazards. This training helps them identify and address dangers, such as cluttered paths or improper storage. Encouraging this proactive approach to safety helps operators take personal responsibility for their surroundings, fostering a safer and more effective workplace culture.

The course includes operating procedures and best practices, ensuring that participants are familiar with both current and developing methods for forklift operation. This covers things like start-up and shut-down routines, safe speeds, and turning practices.

"Our goal at Safety First Training is to offer practical training, so employees can easily apply their new skills in their daily work," stated Kevin Mork from Safety First Training. "Safety and efficiency are the heart of our program."

A key feature of this training is its multiple benefits. It helps meet Occupational Health & Safety (OH&S) requirements and reduces the risk of workplace accidents. These accidents not only threaten employee safety but also lead to costly downtime and potential fines. As companies adopt these practices, they can expect greater operational efficiency, which supports productivity and reduces equipment strain, extending the life of their equipment. This helps create a safety-focused work culture where employees feel competent and assured in their roles.

The training covers a range of aspects related to forklift operation. Classroom sessions offer foundational knowledge that sets the stage for practical application. Trainees practice using the equipment in a controlled environment under the watch of seasoned instructors. Evaluations gauge their abilities, highlighting strengths and areas for improvement. Both written and practical tests wrap up the program, ensuring participants have a solid grasp of all the material. Those who pass receive a certificate, acknowledging their expertise.

The program is intended for a wide audience, from new operators to those in need of recertification, and includes personnel from industries like warehousing, logistics, manufacturing, and construction. Its flexibility ensures every participant gets a complete understanding of forklift safety and operation, suited to their experience and job needs.

Safety First Training places a strong focus on compliance, making sure the program aligns with all provincial and federal safety regulations, including CSA Standard B335-15. This guarantees that each session meets Canadian laws' high standards. Complying with these regulations helps companies uphold their reputation and steer clear of legal issues.

"Safety First Forklift Training Toronto is designed to adapt to various needs, featuring experienced and certified instructors, options for different equipment types, and the convenience of on-site training," said Kevin

Mork. This flexibility allows businesses to train personnel efficiently without interrupting daily operations. On-site training adds another layer of convenience by tailoring lessons to specific workplace environments.

Whether for individuals who need certification or companies aiming to boost their safety standards, Safety First Training Ltd. offers a robust and dependable solution for forklift operators throughout Canada. The program seeks to meet and exceed the expectations set by safety standards, providing a comprehensive forklift training approach that prioritizes skill and safety at all levels of operation.
